Elasticity and Geometry Basile Audoly,Yves Pomeau,2010-06-24 We experience elasticity everywhere in daily life in the straightening or curling of hairs the irreversible deformations of car bodies after a crash or the bouncing of elastic balls in ping pong or soccer The theory of elasticity is essential to the recent developments of applied and fundamental science such as the bio mechanics of DNA filaments and other macro molecules and the animation of virtual characters in computer graphics and

materials science In this book the emphasis is on the elasticity of thin bodies plates shells rods in connection with geometry It covers such topics as the mechanics of hairs curled and straight the buckling instabilities of stressed plates including folds and conical points appearing at larger stresses the geometric rigidity of elastic shells and the delamination of thin compressed films It applies general methods of classical analysis including advanced nonlinear aspects bifurcation theory boundary layer analysis to derive detailed fully explicit solutions to specific problems These theoretical concepts are discussed in connection with experiments Mathematical prerequisites are vector analysis and differential equations The book can serve as a concrete introduction to nonlinear methods in analysis      **Geometry of the Quintic** Jerry Michael

Shurman,1997-01-31 This book helps students at the advanced undergraduate and beginning graduate levels to develop connections between the algebra geometry and analysis that they know and to better appreciate the totality of what they have learned The text demonstrates the use of general concepts by applying theorems from various areas in the context of one problem solving the quintic The problem is approached from two directions the first is Felix Klein s nineteenth century approach using the icosahedron The second approach presents recent works of Peter Doyle and Curt McMullen which update Klein s use of transcendental functions to a solution through pure iteration      Groups, Combinatorics & Geometry A. Information Geometry and Its Applications Nihat Ay, Paolo Gibilisco, František Matúš, 2018-11-03 The book gathers contributions from the fourth conference on Information Geometry and its Applications which was held on June 12-17 2016 at Liblice Castle Czech Republic on the occasion of Shun-ichi Amari's 80th birthday and was organized by the Czech Academy of Sciences Institute of Information Theory and Automation. The conference received valuable financial support from the Max Planck Institute for Mathematics in the Sciences, Information Theory of Cognitive Systems Group, Czech Academy of Sciences Institute of Information Theory and Automation, and Università degli Studi di Roma Tor Vergata. The aim of the conference was to highlight recent advances in the field of information geometry and to identify new research directions. To this end, the event brought together leading experts in the field who in invited talks and poster sessions discussed both theoretical work and achievements in the many fields of application in which information geometry plays an essential role.

Geometric Modeling: Theory and Practice Wolfgang Straßer, Reinhard Klein, René Rau, 2012-12-06 The Blaubeuren Conference Theory and Practice of Geometric Modeling has become a meeting place for leading experts from industrial and academic research institutions, CAD system developers and experienced users to exchange new ideas and to discuss new concepts and future directions in geometric modeling. The relaxed and calm atmosphere of the Heinrich Fabri Institute in Blaubeuren provides the appropriate environment for profound and engaged discussions that are not equally possible on other occasions. Real problems from current industrial projects as well as theoretical issues are addressed on a high scientific level. This book is the result of the lectures and discussions during the conference which took place from October 14th to 18th 1996. The contents is structured in 4 parts: Mathematical Tools, Representations, Systems, Automated Assembly. The editors express their sincere appreciation to the contributing authors and to the members of the program committee for their cooperation, the careful reviewing and their active participation that made the conference and this book a success.

**Theory and Practice of Geometric Modeling** Wolfgang Strasser, Hans-Peter Seidel, 1989-10-10 This book originates from the lectures given at the international conference Theory and Practice of Geometric Modeling Blaubeuren FRG October 3-7 1988 that brought together leading experts from universities, system developers and system users to discuss new concepts and future trends in geometric modeling. The book covers a variety of topics on an advanced level and is organized as follows: Part A contains new algorithms and techniques for modeling objects that are bounded by free form surfaces; Part B focuses on surface-surface intersections, new types of blending surfaces and speed ups for ray tracing; Part C contains some new geometric tools; Part D discusses different representation schemes in solid modeling, conversions between these different schemes and some applications; Part E covers some issues of product modeling, automatic tolerancing, high level specification of solid models, constraints, features and the need for better user interfaces.
