Forest-Water Interactions Delphis F. Levia, Darryl E.

Carlyle-Moses, Shin'ichi Iida, Beate Michalzik, Kazuki Nanko, Alexander Tischer, 2020-02-05 The United Nations has declared 2018 2028 as the International Decade for Action on Water for Sustainable Development This is a timely designation In an increasingly thirsty world the subject of forest water interactions is of critical importance to the achievement of sustainability goals The central underlying tenet of this book is that the hydrologic community can conduct better science and make a more meaningful impact to the world's water crisis if scientists are 1 better equipped to utilize new methods and harness big data from either or both high frequency sensors and long term research watersheds and 2 aware of new developments in our process based understanding of the hydrological cycle in both natural and urban settings Accordingly this forward looking

book delves into forest water interactions from multiple methodological statistical and process based perspectives with some chapters featuring data sets and open source R code concluding with a chapter on future forest hydrology under global change Thus this book describes the opportunities of convergence in high frequency sensing big data and open source software to catalyze more comprehensive understanding of forest water interactions The book will be of interest to researchers graduate students and advanced undergraduates in an array of disciplines including hydrology forestry ecology botany and environmental engineering
