

Loader Arm/Shovel Control (JCB style single lever drive control)

The right hand lever controls the movement of the loader arm and the shovel (or any other attachment which is installed on the loader arm).

The lever has four main movements and is spring-loaded to its central (hold) position.

The speed of loader/shovel movement depends on how far you move the lever; the further you move the lever the faster the action.

The main lever movements are shown on the illustration [Fig 27](#) (P. 49). Their effects are described below. Combined actions can be achieved by moving the lever diagonally.

- 1 To raise the loader arm pull the lever back.
- 2 To lower the loader arm, push the lever forward.

WARNING

If Float is selected with the loader raised, the loader will descend to ground level and 'float' across it as you travel. You will not have control over the rate of fall.

3-3-2-7

- 3 To select float, press and release switch A. Always lower the loader before selecting float.

Note: When float is selected the shovel is free to ride up and down over the ground as the machine travels. Float will remain selected until switch A is pressed again.

- 4 To roll the shovel forward (dump), push the lever to the right.
- 5 To roll the shovel back (crowd), push the lever to the left.

CAUTION

Do not attempt to operate the machine immediately after starting in cold conditions, i.e. below -5°C (20°F). The machine may not respond properly to control movements. Allow at least 10 minutes warm up time with the engine at half throttle. Operate the arm and bucket services to warm the hydraulic oil.

3-3-3-10-1

WARNING

On machines equipped with auxiliary hydraulics option: The loader controls can be operated without the engine running when the key is in the ON position, if the restraint bar and the left armrest are in the down position.
