Coral Bleaching Madeleine J. H. van Oppen, Janice M. Lough, 2018-07-05 One of the most serious consequences of global climate change for coral reefs is the increased frequency and severity of mass coral bleaching events and since the first edition of this volume was published in 2009 there have been additional mass coral bleaching events This book provides comprehensive information on the causes and consequences of coral bleaching for coral reef ecosystems from the genes and microbes involved in the bleaching response to individual coral colonies and whole reef systems It presents detailed analyses of how coral bleaching can be detected and quantified and reviews future scenarios based on modeling efforts and the potential mechanisms of acclimatisation and adaptation It also briefly discusses emerging research areas that focus on the development of innovative interventions aiming to increase coral climate resilience and restore reefs *Nanotechnologies in Neuroscience and Neuroengineering* Ioan Opris, Mikhail Lebedev, Ruxandra Vidu, Victor Manuel Pulgar, Marius Enachescu, Manuel Fernando Casanova, 2020-05-05 **Future of STEM education: Multiple perspectives from researchers** Subramaniam Ramanathan, Ida Ah Chee Mok, 2023-03-28 **Corrective Endoscopy and Surgery in Inflammatory Bowel and Colorectal Diseases - E-Book** Bo Shen, Ravi P. As we know diabetes mellitus is the most common metabolic endocrine disorder According to the WHO and American Diabetes Mellitus diabetes mellitus is the 3rd leading cause of death if we were to include all secondary complications However without including secondary complications it is 7th place in mortality and morbidity The point to be considered in the case of diabetes mellitus is the secondary complications caused in this condition Almost all organs affected by diabetes and results in a potentially worse condition The major secondary complications are neuropathy nephropathy retinopathy and diabetes foot microvascular and macrovascular complications The long term complications grow slowly in the case of diabetes As the time living with diabetes becomes longer controlled glucose levels will be more difficult to achieve meaning there there will be more long term complications The aim of the current Research Topic on the secondary complications of diabetes and their management is to publish good quality research articles as well as reviews which should address the management of diabetes abnormalities of secondary complications and

other disease involved in diabetes Potential Topics includes but not restricted to Secondary complications of diabetes mellitus Microvascular and macrovascular complications The role of oxidative stress in the diabetes burden New insights in glycemic control New strategies approaches to manage secondary complications such as Stearoyl CoA dismutase Acetyl CoA Carboxylase Adiponectin Adipocyte complement related protein 30 Hormone Sensitive Lipase HSL Inhibitors Recent development in the therapeutic approaches for glucose management such as Protein tyrosine phosphatase 1B PTP1B inhibitors Glycogen synthase kinase 3 GSK3 inhibitors 3 Adrenergic receptor agonist Retinoid X receptor PPAR agonist AMP activated protein kinase Development of new target as a target for antihyperglycemic drug designing

Ome-wide Studies of Grapevine Fruit Composition and Responses to Agro-environmental Factors in the Era of Systems Biology José Tomás Matus, Simone Diego Castellarin, Giovanni Battista Tornielli, 2019-12-06 Fruits play a substantial role in the human diet as a source of vitamins minerals dietary fiber and a wide range of molecules relevant to health promotion and disease prevention The characterization of genes involved in the accumulation of these molecules during fruit development and ripening and in the overall plant s response to the environment constitutes a fundamental step for improving yield and quality related traits and for predicting this crop s behavior in the field This is certainly the case for grapevine *Vitis vinifera* L one of the most largely cultivated fruit crops in the world The cultivation of this species is facing challenging scenarios driven by climate change including increases in atmospheric carbon dioxide CO₂ solar radiation and earth surface temperature and decreases of water and nutrient availability All these events will potentially affect the grapevine phenology physiology and metabolism in many growing regions and ultimately affect the quality of their fruits and of the most important derived product the wine The sequencing of the grapevine genome has given rise to a new era characterized by the generation of large scale data that requires complex computational analyses Numerous transcriptomic and metabolomic studies have been performed in the past fifteen years providing insights into the gene circuits that control the accumulation of all sorts of metabolites in grapevines From now on the integration of two or more omics will allow depicting gene transcript metabolite networks from a more holistic i e systems perspective This eBook attempts to support this new direction by gathering innovative studies that assess the impact of genotypes the environment and agronomical practices on fruits at the ome scale The works hereby collected are part of a Research Topic covering the use of omics driven strategies to understand how environmental factors and agronomical practices including microclimate modification e g sunlight incidence or temperature water availability and irrigation and postharvest management affect fruit development and composition These studies report well settled transcriptomic and metabolomic methods in addition to newly developed techniques addressing proteome profiles genome methylation landscapes and ionomic signatures some of which attempt to tackle the influence of terroir i e the synergic effect of micro climate soil composition grape genotype and vineyard practices A few reviews and opinions are included that focus on the advantages of applying network theory in grapevine research Studies on vegetative organs in their

Sexually dimorphic physiology that contributes to sex differences in cardiovascular therapeutic responses may include immune responses, cardiovascular health, the blood brain barrier, coronary atherosclerosis, pathology, complications of COVID 19 infections and the interplay between psychological factors and sedentarism. Furthermore, current knowledge indicates the role of hormonal regulation has a significant impact in sex specific differences across the clinical cardiology field. The National Institute of Health NIH previously adopted a policy to encourage researchers to consider sex as a biological variable SABV as well as Sex and Gender Equity in Research SAGER. In order to promote sexual dimorphic cardiovascular therapeutic development, we have organized this special topic Sex Differences and Cardiovascular Therapeutics to provide a scientific forum for cardiovascular scientists and clinicians to present their newest findings in characterizing sex differences in cardiovascular therapeutics. Potential areas of research within this collection may include but are not limited to: 1. Different outcomes and responses to drug treatment in cardiovascular disease between male and female. 2. Mechanisms of sexual dimorphic response and outcomes related to drug treatment of cardiovascular disease. 3. Sex hormones and their receptors in cardiovascular function in animal studies and clinical therapeutic applications. 4. Gender affirming hormone therapy and
