Mathematics for Healthcare Krasimira Tsaneva-Atanasova, Vanessa Diaz-Zuccarini, 2018-09-28 In 1996 and with extraordinary prescience Panfilov and Holden had highlighted in their seminal book Computational Biology of the Heart that biology was potentially the most mathematical of all sciences Fast forward 20 years and we have seen an explotion of applications of mathematics in not only biology but healthcare that has already produced significant breakthroughs not imaginable more than 20 years ago Great strides have been made in explaining through quantitative methods the underlying mechanisms of human disease not without considerable ingenuity and effort Biological mechanisms are bewildering complex ever evolving multi scale variable difficult to fully access and understand This poses immense challenges to the computational physiology community that nevertheless has developed an impressive arsenal of tools and methods in a vertiginous race to combat disease with the tall order of improving human healthcare Mechanistic models are now contending with the advent of machine learning in healthcare and the hope is that both approaches will be used synergistically since the complexity of human patophysiology and the difficulty of acquiring human datasets will require both deductive and inductive methods This Research Topic presents work that is currently at the frontier in computational physiology with a striking range of applications from diabetes to graft failure and using a multitude of mathematical tools This collection of articles represents a snapshot in a field that is moving a dizzying speed bringing

understanding of fundamental mechanism and solutions to healthcare problems experienced by healthcare systems all over the world *Resources in Education* ,1985 The landscape of school rating systems Benjamin Dalton.,2017-09-28 The rise of the accountability movement in education has resulted in the proliferation of school report cards school ratings and rankings and other kinds of performance reporting for public consumption and policy use To understand the strengths and limitations of school rating systems and the role they play in shaping public perceptions and school improvement practices this paper situates rating systems within the broader field of comparative organizational assessments and neo institutional theory describes school rankings and rating systems in use by states and consumer oriented enterprises and details four aspects of school ratings measurement transformation integration and presentation that affect their use and interpretation
