Phylogenetic Trees and Molecular Evolution David R. Bickel, 2022-09-29 This book serves as a brief introduction to phylogenetic trees and molecular evolution for biologists and biology students. It does so by presenting the main concepts in a variety of ways: first visually, then in a history, next in a dice game, and finally in simple equations. The content is primarily designed to introduce upper-level undergraduate and graduate students of biology to phylogenetic tree reconstruction and the underlying models of molecular evolution. A unique feature also of interest to experienced researchers is the emphasis on simple ways to quantify the uncertainty in the results more fully than is possible with standard methods. **Comparative**

Mathematics of Evolution and Phylogeny Olivier Gascuel, 2005-02-24 This book considers evolution at different scales: sequences, genes, gene families, organelles, genomes, and species. The focus is on the mathematical and computational tools and concepts which form an essential basis of evolutionary studies, indicate their limitations, and give them orientation. Recent years have witnessed rapid progress in the mathematics of evolution and phylogeny, with models and methods becoming more realistic, powerful, and complex. Aimed at graduates and researchers in phylogenetics, mathematicians, computer scientists, and biologists, and including chapters by leading scientists: A. Bergeron, D. Bertrand, D. Bryant, R. Desper, O. Elemento, N. El Mabrouk, N. Galtier, O. Gascuel, M. Hendy, S. Holmes, K. Huber, A. Meade, J. Mixtacki, B. Moret, E. Mossel, V. Moulton, M. Pagel, M. A. Poursat, D. Sankoff, M. Steel, J. Stoye, J. Tang, L. S. Wang, T. Warnow, Z. Adaptive Languages Christian Bentz, 2018-06-11 Languages carry information To fulfil this purpose they employ a multitude of coding strategies This book explores a core property of linguistic coding called lexical diversity Parallel text corpora of overall more than 1800 texts written in more than 1200 languages are the basis for computational analyses Different measures of lexical diversity are discussed and tested and Shannon's measure of uncertainty the entropy is chosen to assess differences in the distributions of words To further explain this variation a range of descriptive explanatory and grouping factors are considered in a series of statistical models The first category includes writing systems word formation patterns registers and styles The second category includes population size non native speaker proportions and language status Grouping factors further elicit whether the results extrapolate across or are limited to specific language families and areas This account marries information theoretic methods with a complex systems framework illustrating how languages adapt to the varying needs of their users It sheds light on the puzzling diversity of human languages in a quantitative data driven and reproducible manner
