Flying Pigs Lab

Determine the period
of a flying pig without a stopwatch?

This will be an informal lab write-up (complete this form and turn it in), one per student. Please answer questions ahead of the lab.

Central Challenge: You will use a flying pig that executes motion in a conical pendulum to study circular motion. Given only a meter stick you must design a procedure and make measurements to predict and measure the period of motion. You will then use a stopwatch to measure the actual period and compare to that derived.

Background: Look at your U3 class notes, lookup Newton's second law, pendulum's, conical pendulum

Safety: Number One. Be mindful of other students in your experimental area, and your own exposure to movement of the equipment. General lab safety guidelines should always be observed.

Equipment and Materials: Just the pigs, meter sticks and a stopwatch to measure and compare with predicted value.

Pre-Lab: Mr. N has a set of flying pigs.

1. What forces are acting on the pig and what are they? Draw a FBD (3pts)
2. What is the acceleration in the vertical direction? In the horizontal direction? (2pts)
3. Write $F_{net} = mA$ equations. Solve for period, T . Show your work... (4pts)
