

## Animal Adaptations

The following show a list of adaptations found in plants and animals . Give the function of each adaptation, and identify what habitat this animal can be found.

**Adaptations:** Their eyes and nostrils close by reflex when the animal goes underwater, and they have a transparent third eyelid, or nictitating membrane, that covers the eye as the animal moves through the water. (Alligators also have a very powerful tail, strong jaws, and thick skin)

**Function:** The third eye can be drawn down for protection from debris and eyes. The nostrils close to prevent water from entering the lungs.

**Animal:** American Alligator

**Habitat:** Wetland

**Adaptations:** Their sandy colored fur, and very large ears as compared to other fox.

**Function:** Their sandy fur helps to reflect heat, and also provides excellent camouflage. Large ears are more sensitive which can help the fox hear prey underground. Their large ears also help to cool off bodies heat on hot days in the desert.

**Animal:** Fennec Fox

**Habitat:** Savanna Desert

**Adaptations:** A single blowhole at the top surface of its head. The blowhole is covered by a muscular flap, which provides a watertight seal. A tail fluke and echolocation (works by making a series of clicking sounds then listening for the echo)

**Function:** The blowhole allows the dolphin to breath oxygen through the lungs. A fluked tail to provide power and optimize speed under water. Echolocation is used to hunt and to locate small objects hundreds of yards away.

**Animal:** Bottlenose Dolphin

**Habitat:** Ocean
