WHAT IS A PROGRAMMER?

an Explanation for Manufacturers (as recommended by the Energy Savings Trust)

Programmers allow you to set ON and OFF times periods. Some heaters control the central heating and domestic hot water or set OFF at the same time, while others allow the domestic hot water and heating to work or set up at different times. On the ON and OFF time periods to suit your own needs. In some programmes you may also set whether you want the heating and/or water to be automatically on with the chosen ON and OFF heating periods or the programmer OFF. The time of the programmer must be correct. Some types have a time indicated in spring and a second of the changes between Summer/ Winter, Fall and Winter. Summer Time, you may be able to temporarily adjust the heating programme, for example, Summer, Autumn or Winter Time, as indicated in the manufacturer's instructions. The heating will not work if the time programme has expired the heating off time. If you have a time-lapse outside the water heating set for each of the summer/autumn/winter that the hot water has received the correct temperature.

Easy to use with clear buttons combined with 'LIFT' technology and an LCD screen allows you to confirm changes and stay in control.

LIFT Technology provides you with information on current feedback and operating conditions to suit other features.

Extra Large LCD Liquid Crystal Display with **Backlight** provides clear and readable information, even in the dark.

Independent Hot Water Heating & Hot Water Programming so you choose settings, but not limited, to each day of the week to meet your demands, while maximizing energy savings, in other than your personal settings.

Automatic Summer/Winter Time Change will adjust the clock forward and backward automatically when the clocks change, leaving you having to change your internal clock time.

Built-in Memory holds your programmed scheduling, even if the mains power fails.

Energy Efficiency and the Environment

Home energy use is responsible for more than 1/3 of the total UK carbon emissions which contribute to climate change. Heating and hot water systems based on fossil fuels account for 1/3 of the figure, so it is important to understand how your property can improve its energy efficiency while maintaining your comfort.

Your Programmer should be used in conjunction with appropriate temperature controls. In order to save energy the following general points should be observed:

1. Ensure your system contains a room thermostat and a hot water thermostat, and that both are set to appropriate temperature levels. Typically 20°C for the room temperature and between 55 – 60°C for the hot water temperature.
2. Programme your heating and hot water to go off when you are not in the house. If you are concerned about possible frost damage to any exposed pipe-work, it is advisable to fit a frost protection system – your dealer can advise you about this.
3. Think about how you use your domestic hot water – if you have a storage system, it is not necessary to have this switched on at all the time, even when you are in the house.
4. Consider the heat up times required for your central heating. Every house responds differently when the heating is switched on. Adjust the start time so that you are not cold when you get up in the morning. A shorter heat up time is required for other heating periods.
5. In the evening, after the house is up to temperature, it is often possible to switch off the heating up to an hour before you go to bed, without any noticeable reduction in comfort.
