

Introducing Macintosh.  
What makes it tick. And talk.

Well, to begin with, I'm not an alternating current.

Secondly, none of the fastest hard-ways to come down the pile in the last 5 years.

**Abstract**

Source: Board of Directors for the American and British.

Macintosh's brain is the same blazing-hot 32-bit microprocessor we gave our other brainchild, the Lisa™ Personal Computer. The most powerful than the 86-in-8088 found in current generation computers.

At least in the same Lisa Technology of windows, pull-down menus, mouse commands and icons. All of which make that 32-bit power far more useful by making the Macintosh™ Personal Computer far easier to use than, current generation

computers. In fact, if you can point with  
your hand, you can use it.

Now for some small talk:

Thanks to its size, if you can't bring the problem to a Macintosh, you can always

being a Macintosh to the problem. (It weighs 9 pounds less than the most popular "portable.")

Another miracle of miniaturization is Macromin's built-in 7½" drive. Its disk size 400K—more than conventional 7½" floppy. So while they're big enough to hold a disk full of work, they're small enough to fit in a shirt pocket. And, they're truly created in a rigid plastic so there's really no contact.

And talk about programming:

There are already plenty of programs to honor a Martin Luther King Jr. birthday.

a program that, for the first time, lets a personal computer produce virtually any image the human hand can create. There's more software on the way from developers like Microsoft, Lotus, and Software Publishers Corp. to mention a few.

And with Macintosh BASIC, Macintosh Pascal and our Macintosh Toolbox for writing your own mouse-driven programs, you, too, could make big bucks in your spare time.

You can even program Macintosh to talk in other languages, like Hebrew or Serbo-Croatian, because it has a built-in polyphonic sound generator capable of producing high-quality speech or music.

The "New York" clause is not a contract with the newspaper, but a contract with the publisher.

There were four other students identified by name in the extremely distorted account of the various leaders.

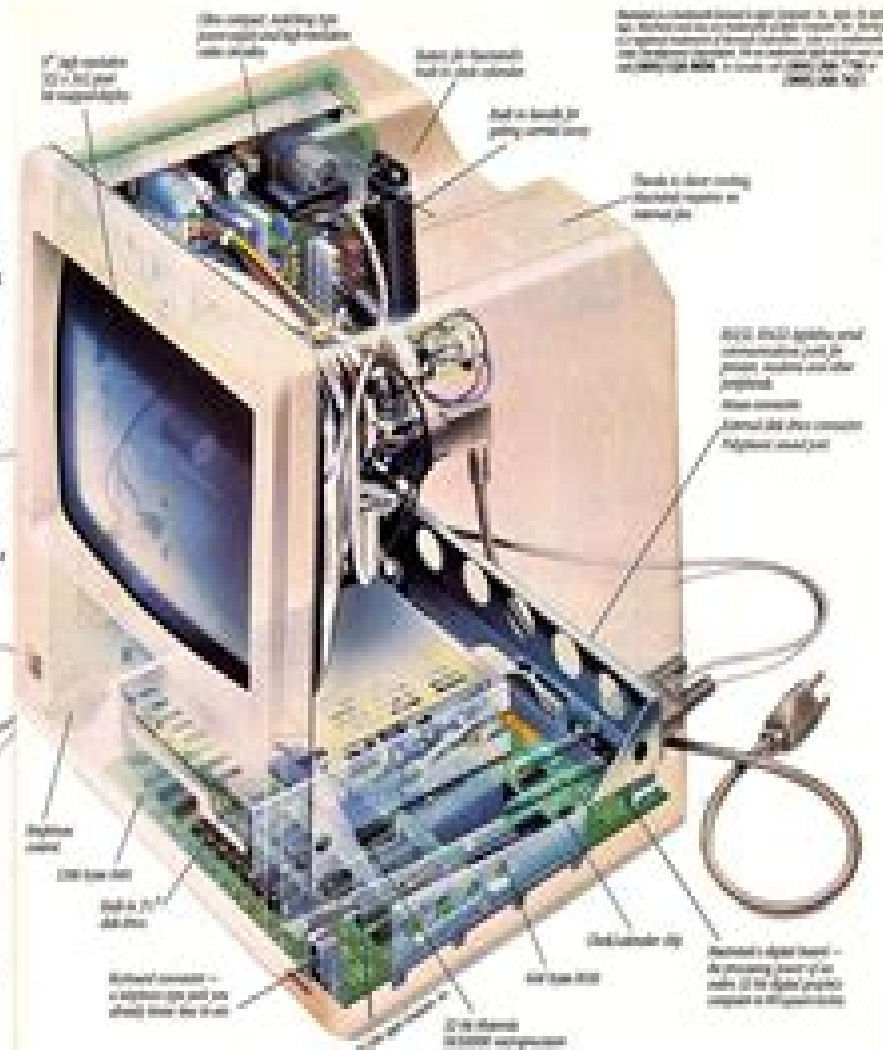

of the success of the 1990s, it is not clear that the 2000s will be any less successful.

All the right connections.

On the back of the machine, you'll find built-in RS232 and RS422 AppleLink serial communication ports. Which means you can connect printers, modems and other peripherals without adding I/O cards. It also means that Macintosh is easy to hook up to a local area network. (With AppleLink, you will be able to interconnect up to 31 different Apple computers and peripherals.)

Should you wish to double the number of users with an external disk.

time, you can do so without paying for a debit-card reader—that's certainly half the cost.

There's also a built-in connector for Macintosh users, a feature that runs up to 1,000 computers that can use the same-manufactured software.

One last comment:

Now that water was one of the legs of the technology, the engineering genius and the software started to emerge.

The track from conventional computer will like to point you in the direction of our newest authorized Apple dealer.

Over 100 of them are eagerly waiting to put a smile in your hand. As one point-and-click makes perfectly clear, the real genius of Macintosh isn't

its 32-bit Low Technology or its 50+ floppy disks, or its serial ports, or its software, or its electronic sound generator.

The real genius is that you don't have to be a genius to use a Macintosh. You just have to be smart enough to buy one.

Soon there'll be just two kinds of people:  
Those who use computers, and  
those who use **Apple**
