1. A Laboratory Information System generates a unique accession (sample) number based on the:

- Test type
- Patient's diagnosis
- Test orders
- Specimen type**

LIS generates separate accession numbers for each specimen type which goes to a different sub-department/ bench. For example, specimen from the same patient collected in EDTA and in a heparin tube will have two separate accession numbers. For more information on LIS: <http://cloudlms.com/blog/what-is-a-lims.html>

- COA is certificate of analysis. This may be required for some medico-legal cases.

2. Which of the following is NOT associated with a risk of thrombosis?

- Prothrombin mutation G20210A
- Hemophilia A**
- Factor V Leiden
- Protein C Deficiency

All of the above except hemophilia A can cause thrombotic disorders caused by changes/deficiencies in regulators of coagulation which normally stop coagulation when the injury is repaired. The deficiencies/mutations result in continuation of coagulation causing clotting in vessels. Anticoagulant therapies such as warfarin or heparin are required to prevent thrombosis in such patients. Hemophilia A is a sex-linked inherited bleeding disorder due to deficiency of F VIII.
