Advanced Automation for Tree Fruit Orchards and Vineyards Stavros G. Vougioukas, Qin Zhang, 2023-05-23 Modern tree fruit orchards and vineyards constitute complex production systems that are exposed to highly dynamic and stochastic natural financial and societal forces and face demands for increased production using fewer resources with reduced environmental impact Successful operation of orchards and vineyards under these conditions is practically impossible without careful and extensive use of state of the art automation technologies and careful planning of future operations e.g. training systems when replanting that can be enabled by knowledge of emerging technologies and future trends Also improvement of existing automation technologies and development of novel future systems cannot be accomplished without a working understanding of the tree and vine biological production systems their management needs and the capabilities and limitations of existing automation systems The book aims to provide the necessary knowledge to achieve the above goals in a way that can engage readers without engineering or horticultural backgrounds *Time-of-Flight and Depth Imaging. Sensors, Algorithms and Applications* Marcin Grzegorzec, Christian Theobalt, Reinhard Koch, Andreas Kolb, 2013-11-09 Cameras for 3D depth imaging using either time of flight ToF or structured light sensors have received a lot of attention recently and have been improved considerably over the last few years The present techniques make full range 3D data available at video frame rates and thus pave the way for a much broader application of 3D vision systems A series of workshops have closely followed the developments within ToF imaging over the years Today depth imaging workshops can be found at every major computer vision conference The papers presented in this volume stem from a seminar on Time of Flight Imaging held at Schloss Dagstuhl in October 2012 They cover all aspects of ToF depth imaging from sensors and basic foundations to algorithms for low level processing to important applications that exploit depth imaging In addition this book contains the proceedings of a workshop on Imaging New Modalities which was held at the German Conference on Pattern Recognition in Saarbrücken Germany in September 2013 A state of the art report on the Kinect sensor and its applications is followed by two reports on local and global ToF motion compensation and a novel depth capture system using a plenoptic multi lens multi focus camera sensor Exploring Occupant Behavior in Buildings Andreas Wagner, William O'Brien, Bing Dong, 2017-10-27 This book is the first to comprehensively cover research methods for building occupant behavior As this is of growing importance for building design and for building performance optimization the book aims to provide a sound scientific basis for experimental studies in this field It introduces the reader to fundamental questions about the topic and unfolds the different fields related to occupant actions and comfort This is followed by more general questions about developing an appropriate research method and experimental design A comprehensive overview of sensors for monitoring environmental and also behavioral and action related quantities helps to set up an experiment In this context different experimental environments and data collection methods in situ laboratories surveys are introduced and discussed in terms of

their suitability for the respective research question Furthermore data management and reporting is addressed The book concludes with fundamental challenges in conducting occupant studies with chapters on ground truth ethics and privacy

Topic is on optical techniques developed to study geometrical changes at the plant level detected within the wavelength spectrum between near UV to near infrared Such techniques typically involve photogrammetric LiDAR or imaging spectroscopy approaches but are not exclusively restricted to these Instruments operating within this range of wavelengths allow capturing a wide range of temporal scales ranging from sub second to seasonal changes that result from plant development environmental effects like wind and heat or genetically controlled adaption to environmental conditions The Research Topic covered a plethora of methodological approaches as suggestions for best practices in the light of a particular research question and to a wider view to different research disciplines and how they utilize their state of the art techniques in demonstrating potential use cases across different scales

Application Technology for Horticultural Crops Xiaolan Lv, Andreas Herbst, Jianli Song, Xue Li, 2024-06-03 Plant chemical protection uses professional spraying machines to transport chemicals such as pesticides and herbicides to the target sites for pest disease and weed control in crop production. Such practices play a vital role in ensuring the supply of food fruits and vegetables for human beings. However, traditional plant chemical application methods suffer from excessive pesticide use, low utilization rate, and high labor intensity due to the backwardness of the existing sprayers, the single atomization technology, etc. In order to boost the progress of modern agriculture, plant chemical protection should be oriented toward efficient, accurate, and intelligent application technologies and equipment. Smart chemical application technology and efficient equipment can effectively reduce pesticide usage, mitigate the harm of chemicals to the environment, and lower labor intensity, realizing the sustainable development of disease and pest control of horticultural crops, ensuring food safety and maintaining crop yield and quality.
