Future Directions for the National Healthcare Quality and Disparities Reports Institute of Medicine, Board on Health Care Services, Committee on Future Directions for the National Healthcare Quality and Disparities Reports, 2010-09-10 As the United States devotes extensive resources to health care evaluating how successfully the U S system delivers high quality high value care in an equitable manner is essential At the request of Congress the Agency for Healthcare Research and Quality AHRQ annually produces the National Healthcare Quality Report NHQR and the National Healthcare Disparities Report NHDR The reports have revealed areas in which health care performance has improved over time but they also have identified major shortcomings After five years of producing the NHQR and NHDR AHRQ asked the IOM for guidance on how to improve the next generation of reports The IOM concludes that the NHQR and NHDR can be improved in ways that would make them more influential in promoting change in the health care system In addition to being sources of data on past trends the national healthcare reports can provide more detailed insights into current performance establish the value of closing gaps in quality and equity and project the time required to bridge those gaps at the current pace of improvement

Envisioning the National Health Care Quality Report Institute of Medicine, Board on Health Care Services, Committee on the National Quality Report on Health Care Delivery, 2001-04-22 How good is the quality of health care in the United States Is quality improving Or is it suffering While the average person on the street can follow the state of the economy with economic indicators we do not have a tool that allows us to track trends in health care quality Beginning in 2003 the Agency for Healthcare Research and Quality AHRQ will produce an annual report on the national trends in the quality of health care delivery in the United States AHRQ commissioned the Institute of Medicine IOM to help develop a vision for this report that will allow national and state policy makers providers consumers and the public at large to track trends in health care quality Envisioning the National Health Care Quality Report offers a framework for health care quality specific examples of the types of measures that should be included in the report suggestions on the criteria for selecting measures as well as advice on reaching the intended audiences Its recommendations could help the national health care quality report to become a mainstay of our nation s effort to improve health care

National Healthcare Quality Report U S Department of Health and Human Serv, U.S. Department of Health and Human Services Staff, 2015-01-16 Each year since 2003 the Agency for Healthcare Research and Quality AHRQ has reported on progress and opportunities for improving health care quality and reducing health care disparities As mandated by the U S Congress the National Healthcare Quality Report NHQR focuses on national trends in the quality of health care provided to the American people 42 U S C 299b 2 b 2 The National Healthcare Disparities Report NHDR focuses on prevailing disparities in health care delivery as it relates to racial factors and socioeconomic factors in priority populations 42 U S C 299a 1 a 6 As in previous years the 2013 NHQR and NHDR track more than 200 health care process outcome and access measures covering a wide variety of conditions and

settings Data years vary across measures most trend analyses include data points from 2000 2002 to 2010 2011 It is important to note that the reports provide a snapshot of health care prior to implementation of most of the health insurance expansions and consumer protections included in the Affordable Care Act and serve as a baseline against which to track progress in upcoming years Each year the reports emphasize one priority population this year s reports provide expanded analyses of people with disabilities including children with special health care needs and adults with multiple chronic conditions

National Healthcare Quality Report, 2005 U.s. Department of Health and Human Services, Agency for Healthcare Research and Quality, 2014-05-03 The National Healthcare Quality Report NHQR is a comprehensive national overview of the quality of health care in the United States It is a companion report to the National Healthcare Disparities Report NHDR which is a comprehensive national overview of disparities in health care affecting racial ethnic and socioeconomic groups and priority populations The 2005 NHQR presents the third annual opportunity to measure the Nation s health care quality and to track trends over time the primary intent of Congress s mandate to the Agency for Healthcare Research and Quality AHRQ to produce the NHQR The NHQR is built on 179 measures assembled across four dimensions of quality effectiveness patient safety timeliness and patient centeredness This year s report focuses on the state of health care quality for a group of 46 core report measures which represent the most important and scientifically credible measures of quality for the Nation as selected by the Department of Health and Human Services HHS Interagency Work Group The distillation of 46 core measures for the 2005 report provides a more readily understandable summary and explanation of the key results derived from the data Also included in the report are four new composite measures which summarize data from a collection of individual measures Composite measures were created for heart attack heart failure pneumonia and patient centered care in addition to an overall measure of the state of health care quality improvement Four themes that emerge from the 2005 NHQR extend the meaning of those from the 2003 and 2004 reports and add new dimensions on understanding change over time Health care quality continues to improve at a modest pace across most measures of quality Health care quality improvement is variable with notable areas of high performance Health care quality is improving but more remains to be done to achieve optimal quality Sustained rates of quality improvement are possible

National Healthcare Quality Report, 2007 U.s. Department of Health and Human Services, Agency for Healthcare Research and Quality, 2014-05-03 Since 2003 the Agency for Healthcare Research and Quality AHRQ together with its partners in the Department of Health and Human Services HHS has reported on progress and opportunities for improving health care quality With this fifth annual National Healthcare Quality Report NHQR these reports will have provided more than 50 000 data points about health care quality in the United States Has it made a difference Have Federal and State governmental agencies provider organizations insurers and employers made progress in improving health care quality and safety While every previous release of the NHQR has attempted to summarize the direction in which health care quality is going this fifth

report tries to summarize the progress that has been made and the remaining challenges to improve health care quality in this Nation. The NHQR is built on 218 measures categorized across four dimensions of quality: effectiveness, patient safety, timeliness, and patient centeredness. This year's report focuses on the state of health care quality for a group of 41 core report measures that represent the most important and scientifically credible measures of quality for the Nation as selected by the HHS Interagency Work Group. The distillation of 41 core measures for the 2007 report provides a more readily understandable summary and explanation of the key results derived from the data. While the measures selected for inclusion in the NHQR are derived from the most current scientific knowledge, this knowledge base is not evenly distributed across health care. The analysis in the following pages centers on measures for which data are available from the baseline year of 2000 or 2001 and the comparison year of 2004 or 2005. Three themes that emerge from the 2007 NHQR emphasize the need to accelerate progress in achieving high quality health care. Health care quality continues to improve, but the rate of improvement has slowed. Variation in quality of health care across the Nation is decreasing, but not for all measures. The safety of health care has improved since 2000, but more needs to be done.

National Healthcare Quality Report, 2012
U.S. Department of Health and Human Services, Agency for Healthcare Research and Quality, 2014-05-03

The U.S. health care system is designed to improve the physical and mental well-being of all Americans by preventing, diagnosing, and treating illness and by supporting optimal function. Across the lifespan, health care helps people stay healthy, recover from illness, live with chronic disease or disability, and cope with death and dying. Quality health care delivers these services in ways that are safe, timely, patient-centered, efficient, and equitable. Unfortunately, Americans too often do not receive care they need or they receive care that causes harm. Care can be delivered too late or without full consideration of a patient's preferences and values. Many times our system of health care distributes services inefficiently and unevenly across populations. Some Americans receive worse care than others. These disparities may occur for a variety of reasons, including differences in access to care, social determinants, provider biases, poor provider-patient communication, and poor health literacy. Each year since 2003, the Agency for Healthcare Research and Quality (AHRQ) has reported on progress and opportunities for improving health care quality and reducing health care disparities. As mandated by the U.S. Congress, the National Healthcare Quality Report (NHQR) focuses on national trends in the quality of health care provided to the American people. The National Healthcare Disparities Report (NHDR) focuses on prevailing disparities in health care delivery as it relates to racial factors and socioeconomic factors in priority populations. As in previous years, we have integrated findings from the 2012 NHQR and NHDR to produce a single summary chapter. This is intended to reinforce the need to consider concurrently the quality of health care and disparities across populations when assessing our health care system. The National Healthcare Reports Highlights seeks to address three questions critical to guiding Americans toward the optimal health care they need and deserve: What is the status of health care quality and disparities in the United States? How have health care quality and

disparities changed over time Where is the greatest need to improve health care quality and reduce disparities Three themes from the 2012 NHQR and NHDR emphasize the need to accelerate progress if the Nation is to achieve higher quality and more equitable health care in the near future Health care quality and access are suboptimal especially for minority and low income groups Overall quality is improving access is getting worse and disparities are not changing Urgent attention is warranted to ensure continued improvements in Quality of diabetes care maternal and child health care and adverse events Disparities in cancer care Quality of care among states in the South **National Healthcare Quality Report, 2006** U.s. Department of Health and Human Services, Agency for Healthcare Research and Quality, 2014-05-03 The Agency for Healthcare Research and Quality AHRQ is pleased to release the fourth annual National Healthcare Quality Report NHQR on behalf of the U S Department of Health and Human Services HHS and in collaboration with an HHS wide Interagency Work Group Like previous reports the 2006 NHQR also received significant guidance from AHRQ leadership and AHRQ s National Advisory Committee The NHQR examines and tracks the quality of health care in the United States using the most scientifically credible measures and data sources available Measures of health care quality address the extent to which providers and hospitals deliver evidence based care for specific services as well as the outcomes of the care provided The measures are organized around four dimensions of quality effectiveness patient safety timeliness and patient centeredness and cover four stages of care staying healthy getting better living with illness or disability and coping with the end of life The NHQR is complemented by its companion report the National Healthcare Disparities Report NHDR a comprehensive national overview of disparities in access to and quality of health care among racial ethnic and socioeconomic groups as well as among subpopulations such as children and the elderly Both reports measure health care quality and track changes over time but with different orientations The NHQR addresses the current state of health care quality and the opportunities for improvement for all Americans as a whole This perspective is useful for identifying where the Nation is doing well and where more work is needed The NHDR addresses the distribution of improvements in health care quality and access across the different populations that make up America This perspective is useful for ensuring that all Americans benefit from improvements in care Both reports perspectives are needed for a complete understanding of quality of healthcare and both reports support HHS Secretary Mike Leavitt s 500 Day Plan to fulfill the President s vision of a healthier America specifically in the areas of better transparency of health care quality information and eliminating inequities in health care The NHQR comprises 211 measures This large measure set is distilled to 42 core measures which are the major focus of the 2006 report of these 40 have data for 2 or more years The measures are balanced across the four dimensions of quality and provide a more readily understandable summary and explanation of the key results derived from the data Major additions to the core measures have been made this year Among them are three new measures on prevention including advice from health care professionals on eating exercise and vision care and two new composite measures for patient safety including measures on

postoperative complications and adverse events Also new measures were added to the overall measure set in the areas of asthma hospice care and patient centeredness in hospitals The Highlights section offers a concise overview of findings from the 2006 NHQR Four themes emerge from the 2006 NHQR Most measures of quality are improving but the pace of change remains modest Quality improvement varies by setting and phase of care The rate of improvement accelerated for some measures while a few continued to show Deterioration Variation in health care quality remains high
