Congress. House. Committee on Science and Technology. Subcommittee on Natural Resources, Agriculture Research, and Environment, 1984 **Disaster Upon Disaster** Susanna M. Hoffma, Roberto E. Barrios, 2019-10-03 A consistent problem that confronts disaster reduction is the disjunction between academic and expert knowledge and policies and practices of agencies mandated to deal with the concern Although a great deal of knowledge has been acquired regarding many aspects of disasters such as driving factors risk construction complexity of resettlement and importance of peoples culture very little has become protocol and procedure Disaster Upon Disaster illuminates the numerous disjunctions between the suppositions realities agendas and executions in the field goes on to detail contingencies predicaments old and new plights and finally advances solutions toward greatly improved outcomes *Recent Hurricane Research* Anthony Lupo, 2011-04-19 This book represents recent research on tropical cyclones and their impact and a wide range of topics are covered An updated global climatology is presented including the global occurrence of tropical cyclones and the terrestrial factors that may contribute to the variability and long term trends in their occurrence Research also examines long term trends in tropical cyclone occurrences and intensity as related to solar activity while other research discusses the impact climate change may have on these storms The dynamics and structure of tropical cyclones are studied with traditional diagnostics employed to examine these as well as more modern approaches in examining their thermodynamics The book aptly demonstrates how new research into short range forecasting of tropical cyclone tracks and intensities using satellite information has led to significant improvements In looking at societal and ecological risks and damage assessment authors investigate the use of technology for anticipating and later evaluating the amount of damage that is done to human society watersheds and forests by land falling storms The economic and ecological vulnerability of coastal regions are also studied and are supported by case studies which examine the potential hazards related to the evacuation of populated areas including medical facilities These studies provide decision makers with a potential basis for developing improved evacuation techniques **Swept Away** Alex David, 2019-12-15 As greenhouse gases build in Earth's atmosphere water and air temperatures rise This triggers storms like we've never seen before Extreme weather events from tornadoes to tsunamis are becoming a part of our everyday lives This book examines the history of climate change and details the scientific cause of these storms Additionally it correlates humans as both the cause and the

Emrich, 2020-12-17 Social Sensing and Big Data Computing for Disaster Management captures recent advancements in leveraging social sensing and big data computing for supporting disaster management Specifically analysed within this book are some of the promises and pitfalls of social sensing data for disaster relevant information extraction impact area assessment population mapping occurrence patterns geographical disparities in social media use and inclusion in larger decision support systems Traditional data collection methods such as remote sensing and field surveying often fail to offer timely information during or immediately following disaster events Social sensing enables all citizens to become part of a large sensor network which is low cost more comprehensive and always broadcasting situational awareness information However data collected with social sensing is often massive heterogeneous noisy and unreliable in some aspects It comes in continuous streams and often lacks geospatial reference information Together these issues represent a grand challenge toward fully leveraging social sensing for emergency management decision making under extreme duress Meanwhile big data computing methods and technologies such as high performance computing deep learning and multi source data fusion become critical components of using social sensing to understand the impact of and response to the disaster events in a timely fashion This book was originally published as a special issue of the International Journal of Digital Earth

Pilot study on the experiences of hurricane shelter evacuees Laura DiGrande, Lisa Carley-Baxter, Christine Bevc, Suzanne Triplett, Craig William, Lewis-Owen, Jessica

Williams,2019-09-11 Community members who evacuate to shelters may represent the most socially and economically vulnerable group within a hurricane s affected geographic area Disaster research has established associations between socioeconomic conditions and adverse effects but data are overwhelmingly collected retrospectively on large populations and lack further explication As Hurricane Florence approached North Carolina in September 2018 RTI International developed a pilot survey for American Red Cross evacuation shelter clients Two instruments an interviewer led paper questionnaire and a short message service SMS text questionnaire were tested A total of 200 evacuees completed the paper survey but only 34 participated in the SMS text portion of the study Data confirmed that the sample represented very marginalized coastline residents 60 percent were unemployed 70 percent had no family or friends to stay with during evacuation 65 percent could not afford to evacuate to another location 36 percent needed medicine medical care and 11 percent were homeless Although 19 percent of participants had a history of evacuating for prior hurricanes disasters and 14 percent had previously utilized shelters we observed few associations between previous experiences and current evacuation resources behaviors or opinions about safety This study demonstrates that for vulnerable populations exposed to storms of increasing intensity and frequency traditional survey research methods are best employed to learn about their experiences and needs **Oddball Florida**

United States. Congress. House. Committee on Science and Technology. Subcommittee on Natural Resources, Agriculture Research, and Environment,1985 **International Security and the United States** Paul Bellamy,Karl DeRouen

Jr.,2007-12-30 Shaped by often very dramatic events international security and the international system have changed significantly in recent years The conclusion of the Cold War the emergence of new political systems the growth of significant threats such as terrorism and the development of new security doctrines have driven global transformation These volumes provide detailed information on countries from every geographic region and continent on the globe evaluating their relationship with the United States and measuring the potential security threats posed by each The contributors consider factors such as geography and history the political systems of each state their human rights records the ability to maintain law and order and provide security within their own borders the impact of current administrations rulers or regimes on a nation s foreign policy and the regional factors that often dictate local politics in order to make their assessments All of the

entries in this set follow a standardized outline and present a concise but detailed assessment of each country. Each entry begins with a discussion of geography through which the contributors identify the state's natural resources, environmental issues, and the extent of its territorial jurisdiction. The focus then shifts to social and political organizations. Populations are broken down by not only numbers but by ethnic and religious affiliations, access to health care, education, housing, and income. All of those aspects are often a reflection of the system of government in place. Like the United States, those governments are comprised of different parties or leaders with various interests. The contributors assess those entities and interests within each country. They measure the ways in which factors of religion, nationalism, and globalism impact and shape not only domestic policies but also foreign policy and ultimately the country's relationship to the United States. Other areas such as military organizations and activities, records on human rights, and justice, recognition of, and adherence to international conventions, and national attitudes towards security are also considered. Every entry also includes an assessment of current and potential security issues and an analysis of current terrorist threats that may already be in place or that are beginning to develop in various nations. Each entry concludes with a summary of current relationships with the United States. Those relationships are defined by the identification and brief analysis of formal trade aid or military treaties in place between the United States and other nations, the general attitude of a nation's citizenry and its government towards the U.S., and finally identifying any social and cultural links between nations and the U.S., migration patterns, language, economies. Finally, possible changes and trends that will impact security issues are identified by the contributors. Taken in their entirety, these encyclopedias contain a wealth of information in a concise format that will serve as a valuable reference guide not only for specialists but general readers as well.

[Building Resilience](#) Daniel P. Aldrich, 2012-08-15 The factor that makes some communities rebound quickly from disasters while others fall apart. A fascinating book on an important topic. E. L. Hirsch in

Choice Each year natural disasters threaten the strength and stability of communities worldwide Yet responses to the challenges of recovery vary greatly and in ways that aren't explained by the magnitude of the catastrophe or the amount of aid provided by national governments or the international community The difference between resilience and disrepair as Daniel P Aldrich shows lies in the depth of communities social capital Building Resilience highlights the critical role of social capital in the ability of a community to withstand disaster and rebuild both the infrastructure and the ties that are at the foundation of any community Aldrich examines the post disaster responses of four distinct communities Tokyo following the 1923 earthquake Kobe after the 1995 earthquake Tamil Nadu after the 2004 Indian Ocean Tsunami and New Orleans post Katrina and finds that those with robust social networks were better able to coordinate recovery In addition to quickly disseminating information and financial and physical assistance communities with an abundance of social capital were able to minimize the migration of people and valuable resources out of the area With governments increasingly overstretched and natural disasters likely to increase in frequency and intensity a thorough understanding of what contributes to efficient reconstruction is more important than ever Building Resilience underscores a critical component of an effective response

The Future of Disaster Management in the U.S. Amy LePore, 2016-12-08 U S congressional debates over the last few years have highlighted a paradox although research demonstrates that emergencies are most effectively managed at the local level fiscal support and programmatic management in response to disasters has shifted to the federal level While the growing complexity of catastrophes may overwhelm local capacities and would seem to necessitate more federal engagement can a federal approach be sustainable and can it contribute to local capacity building This timely book examines local capacity building as well as the current legal policy and fiscal framework for disaster management questioning some of the fundamentals of the current system exploring whether accountability and responsibilities are correctly placed offering alternative models and taking stock of the current practices that reflect an effective use of resources in a complex emergency management system The Future of Disaster Management in the U S will be of interest to disaster and emergency managers as well as public servants and policy makers at all levels tasked with responding to increasingly complex catastrophes of all kinds
