# Head First Java 4th Edition

## Head First Java 4th Edition:

*Head First Java* Kathy Sierra, Bert Bates, 2005-02-09 Learning a complex new language is no easy task especially when it is an object oriented computer programming language like Java. You might think the problem is your brain. It seems to have a mind of its own, a mind that doesn't always want to take in the dry technical stuff you're forced to study. The fact is your brain craves novelty. It's constantly searching, scanning, waiting for something unusual to happen. After all, that's the way it was built to help you stay alive. It takes all the routine, ordinary, dull stuff and filters it to the background so it won't interfere with your brain's real work: recording things that matter. How does your brain know what matters? It's like the creators of the *Head First* approach say: suppose you're out for a hike and a tiger jumps in front of you, what happens in your brain? Neurons fire. Emotions crank up. Chemicals surge. That's how your brain knows. And that's how your brain will learn Java. *Head First Java* combines puzzles, strong visuals, mysteries, and soul searching interviews with famous Java objects to engage you in many different ways. It's fast, it's fun, and it's effective. And despite its playful appearance, *Head First Java* is serious stuff, a complete introduction to object oriented programming and Java. You'll learn everything from the fundamentals to advanced topics including threads, network sockets, and distributed programming with RMI. And the new second edition focuses on Java 5.0, the latest version of the Java language and development platform. Because Java 5.0 is a major update to the platform with deep code level changes, even more careful study and implementation is required. So learning the *Head First* way is more important than ever. If you've read a *Head First* book, you know what to expect: a visually rich format designed for the way your brain works. If you haven't, you're in for a treat. You'll see why people say it's unlike any other Java book you've ever read. By exploiting how your brain works, *Head First Java* compresses the time it takes to learn and retain complex information. Its unique approach not only shows you what you need to know about Java syntax, it teaches you to think like a Java programmer. If you want to be bored, buy some other book. But if you want to understand Java, this book's for you. **Head First Java** Kathy Sierra, Bert Bates, 2003 *Head First Java* engages readers on many levels, bringing the latest learning theories and research together to create not just a book to read, but a multi-sensory learning experience. [Java Enterprise in a Nutshell](#) Jim Farley, William Crawford, 2006 With the recent release of Java 2 Enterprise Edition 1.4, developers are being called on to add even greater, more complex levels of interconnectivity to their applications. To do this, Java developers need a clear understanding of how to apply the new APIs and the capabilities and pitfalls in the program which they can discover in this edition. **Head First Programming** David Griffiths, Paul Barry, 2009-11-16 Looking for a reliable way to learn how to program on your own without being overwhelmed by confusing concepts, *Head First Programming* introduces the core concepts of writing computer programs: variables, decisions, loops, functions, and objects, which apply regardless of the programming language. This book offers concrete examples and exercises in the dynamic and versatile Python language to demonstrate and reinforce these concepts. Learn the basic tools to start writing the programs that interest you and get a

better understanding of what software can and cannot do When you re finished you ll have the necessary foundation to learn any programming language or tackle any software project you choose With a focus on programming concepts this book teaches you how to Understand the core features of all programming languages including variables statements decisions loops expressions and operators Reuse code with functions Use library code to save time and effort Select the best data structure to manage complex data Write programs that talk to the Web Share your data with other programs Write programs that test themselves and help you avoid embarrassing coding errors We think your time is too valuable to waste struggling with new concepts Using the latest research in cognitive science and learning theory to craft a multi sensory learning experience Head First Programming uses a visually rich format designed for the way your brain works not a text heavy approach that puts you to sleep *Head First.
