Nanobrain Anirban Bandyopadhyay, 2020-04-03 Making an artificial brain is not a part of artificial intelligence It will be a revolutionary journey of mankind exploring a science where one cannot write an equation a material will vibrate like geometric shape and then those shapes will change to make decisions Geometry of silence plays like a musical instrument to mimic a human brain our thoughts imagination everything would be a 3D shape playing as music composing music would be the brain's singular job For a century the Turing machine ruled human civilization it was believed that irrespective of complexity all events add up linearly This book is a thesis to explore the science of decision making where events are 3D geometric shapes events grow within and above never side by side The book documents inventions and discoveries in neuroscience computer science materials science mathematics and chemistry that explore the possibility of brain or universe as a time crystal The philosophy of Turing the philosophy of membrane based neuroscience and the philosophy of linear sequential thought process are challenged here by considering that a nested time crystal encompasses the entire conscious universe Instead of an algorithm the pattern of maximum free will is generated mathematically and that very pattern is encoded in materials such that its natural vibration integrates random events exactly similar to the way nature does it in

every remote corner of our universe Find how an artificial brain avoids any necessity for algorithm or programming using the pattern of free will

Role of the Southern Ocean in Atmospheric pCO₂ Change: Observations, Simulations and Paleorecords Zhifang Xiong, Di Qi, Xu Zhang, Thomas Algeo, Jun Zhao, 2025-01-02 The Southern Ocean plays a key role in atmospheric CO₂ sequestration accounting for 40-50% of the anthropogenic CO₂ absorbed by the modern ocean. The size of this sink is attributed to strong water mass sinking i.e. mode intermediate water and bottom water formation which transports carbon to the mid and deep ocean thus isolating it from the atmosphere for centuries. The Southern Ocean also played a critical role in atmospheric pCO₂ variations in the geologic past on both orbital and millennial timescales. Moreover, the Southern Ocean modulates atmospheric and oceanic circulation in the tropics remotely influencing low latitude atmospheric CO₂ exchange. Thus the Southern Ocean is a key component of the global climate system whose operation must be better understood at a range of timescales in order to accurately assess its effects on atmospheric pCO₂ in the future. This Research Topic will consist of a set of cutting edge investigations of the processes and mechanisms of Southern Ocean influence on atmospheric pCO₂ and global climate change.
