On Gaia Toby Tyrrell, 2013-07-21 A critical examination of James Lovelock's controversial Gaia hypothesis One of the enduring questions about our planet is how it has remained continuously habitable over vast stretches of geological time despite the fact that its atmosphere and climate are potentially unstable James Lovelock's Gaia hypothesis posits that life itself has intervened in the regulation of the planetary environment in order to keep it stable and favorable for life First proposed in the 1970s Lovelock's hypothesis remains highly controversial and continues to provoke fierce debate On Gaia undertakes the first in depth investigation of the arguments put forward by Lovelock and others and concludes that the evidence doesn't stack up in support of Gaia Toby Tyrrell draws on the latest findings in fields as diverse as climate science oceanography atmospheric science geology ecology and evolutionary biology He takes readers to obscure corners of the natural world from southern Africa where ancient rocks reveal that icebergs were once present near the equator to mimics of cleaner fish on Indonesian reefs to blind fish deep in Mexican caves Tyrrell weaves these and many other intriguing observations into a comprehensive analysis of the major assertions and lines of argument underpinning Gaia and finds that it is not a credible picture of how life and Earth interact On Gaia reflects on the scientific evidence indicating that life and environment mutually affect each other and proposes that feedbacks on Earth do not provide robust protection against the environment becoming uninhabitable or against poor stewardship by us *Biology*

Maximus the Confessor and Evolutionary Biology Andrew P. Jackson, 2024-11-04 This book brings Maximus the Confessor's logoi doctrine into dialogue with modern day evolutionary biology It explores the extent to which the logoi as described by

Maximus exhibit features that are concordant with evolution before going on to consider more discordant aspects that cannot be ignored The author addresses the curious resonance between the logoi and evolution in a systematic way through a close reading of primary textual material allied with a deep understanding of both the classical Darwinian and extended evolutionary syntheses The study joins with other Maximian interpreters in attesting to the incarnational and theophanic nature of the logoi but seeks to extend this distinctively Eastern Christo cosmology into the problematic territory of biological evolution a territory historically dominated by Western scholarship The book will be of interest to scholars of religion and science as well as Patristics and the Eastern Orthodox theological traditions Evolution , **Hyperparameter Tuning**

Ault Jr.,2021-11-15 Beyond Science Standards captures a vision of science education both whimsical

and serious Ranging across examples from elementary to university level classrooms and grounded in philosophy and history the stories address dimensions beyond the realm of bureaucratic standards Its thesis brings into question the premise of scientific unity and its representation in school as notions of method process nature and practice Schools no less than the sciences profit from playful exploration of musical instruments in fourth grade physical science for example and hotel lobby decorative rock in a college geology course Aesthetic expression permeates geologic interpretation and evolutionary insight in depicting dentition for instance in the history of the horse family and linking this history to changing landscapes Participating in collecting local high altitude weather data enhances trust in climate science especially when the observations benefit the local farming community Allied with historical examples of the conduct of science Beyond Science Standards offers the reader inspiring stories of science teaching varying from place to place time to time discipline to discipline and purpose to purpose

No Free Lunch William A. Dembski, 2006-11 Darwin's greatest accomplishment was to show how life might be explained as the result of natural selection But does Darwin's theory mean that life was unintended William A Dembski argues that it does not In this book Dembski extends his theory of intelligent design Building on his earlier work in The Design Inference Cambridge 1998 he defends that life must be the product of intelligent design Critics of Dembski's work have argued that evolutionary algorithms show that life can be explained apart from intelligence But by employing powerful recent results from the No Free Lunch Theory Dembski addresses and decisively refutes such claims As the leading proponent of intelligent design Dembski reveals a designer capable of originating the complexity and specificity found throughout the cosmos Scientists and theologians alike will find this book of interest as it brings the question of creation firmly into the realm of scientific debate

[4th/Dimension](#), **Modelling Evolution** Eugene Earnshaw-Whyte, 2018-07-06 Evolution by natural selection explains the tree of life and the complex adaptations found throughout nature The power and versatility of evolutionary explanations have proved tempting to scientists outside of biology but adapting evolutionary concepts to new domains has been challenging Even within biology there are many difficult questions and problem cases that face evolutionary theory Modelling Evolution offers a new general account of evolution by natural selection that identifies the essential features of evolutionary models that transcend any particular discipline Evolution by natural selection in its broad sense is the systemic advantage of a type in contrast to the narrow definition using heritable variation in fitness This account is explained contextualised and applied to a variety of questions in both biology and the social sciences Offering an accessible and comprehensive account of evolution that is applicable both to biology and the broader social sciences Modelling Evolution will appeal to students and researchers interested in fields such as biology economics sociology history and psychology
