Lesson #7: Exploring Exponential Growth and Decay**Fighting Fleas**

After a dog or cat is given a preventive flea medicine, the medicine begins to break down in the animal's bloodstream. With each passing hour, there is less active medicine in the blood. The table and the graph show the amount of active medicine in a dog's bloodstream each hour for 6 hours after a 20-milligram dose.

Time since dose (hours)	Active medicine in blood (milligrams)
0	20
1	10
2	5
3	2.5
4	1.25
5	0.625
6	0.3125

Study the pattern of change in the graph and the table.

- A.** How does the amount of active medicine in the dog's blood change from one hour to the next?

- B.** Write an equation to model the relationship between the number of hours since the dose was administered, h , and the milligrams of active medicine, m .

- C.** Based on your knowledge of exponential relationships, what pattern would you expect to see in the data if 40 milligrams of the medicine were given to the dog?
