

FORCES

FORCES

FORCES are caused or measured by physical evidence of the actions of balanced and unbalanced forces on the motion of an object.

FORCES have measurable effects on the motion of an object caused by physical evidence that a pattern can be used to predict future motion.

Balanced Forces

Forces are everywhere. They can be balanced or unbalanced when two opposing forces are balanced, they do not cause any change in the motion (movement) of an object. You can think of balanced forces as canceling each other out. The object that is being acted on by the forces will not have any change in its motion. Think of two teams playing tug-of-war. If the teams are perfectly matched neither team will win. The grass could get on forever because they are an example of balanced forces. A mirror or picture frame hanging on the wall is another example of balanced forces. The force of gravity pulls down, while the hook or nail provides an opposite force holding it up. They are equal and opposite forces. Another word for balanced forces is motion. Another word for balanced forces is and balanced, on the object they exactly cancel out.

Unbalanced Forces

Unlike balanced forces, unbalanced forces DO NOT just moving can be put into motion when that either pushes them or pulls them. Think of a ball when a player runs up to kick it, the ball will be in motion. It will depend on the strength and direction of the force that is applied.
