

Respiration Article & Follow-Up Questions

CELLULAR RESPIRATION

All living things need energy to survive and carry out life processes. Whether an organism makes its own food through photosynthesis or eats another organism for food, all organisms* use the same process to turn their food into usable energy. This process is called *cellular respiration*.

Mitochondrion

Cellular respiration is a chemical reaction that happens in an organelle called the *mitochondrion* (plural: mitochondria). Mitochondria are found in the cells of nearly every organism on Earth. While almost all cells in the human body contain mitochondria, cells that require a lot of energy, such as muscle cells, can contain hundreds or thousands of them.

All organisms need a source of food. In the cellular respiration, plants are performing photosynthesis. Glucose is the main source of energy for cells. Plants use carbon dioxide and water to make glucose. Animals use glucose for energy. They breathe in oxygen and breathe out carbon dioxide. The process of cellular respiration is a cycle. It starts with glucose and oxygen. The glucose is broken down into pyruvate. Pyruvate is then converted into carbon dioxide and water. This process releases energy in the form of ATP (adenosine triphosphate). ATP is used by the cell for various functions. The cycle then repeats itself.

Cellular respiration is a complex process that occurs in the mitochondria. It involves several steps, including glycolysis, the Krebs cycle, and the electron transport chain. At the end of the process, the cell has harvested energy in the form of ATP. Carbon dioxide and water are produced as waste products. In general, animals breathe out the waste products carbon dioxide and water (as water vapor) when they exhale. Plants use the carbon dioxide and water to perform photosynthesis to make more glucose for an energy source. Excess water may leave the plant stomata in a process called transpiration.

*There are some exceptions to this. Some organisms in extreme environments use a different process to generate energy.
