**Optimizing Hyperparameters for Machine Learning Algorithms in Production** Jonathan Krauß, 2022-04-13 Machine learning ML offers the potential to train data based models and therefore to extract knowledge from data Due to an increase in networking and digitalization data and consequently the application of ML are growing in production The creation of ML models includes several tasks that need to be conducted within data integration data preparation modeling and deployment One key design decision in this context is the selection of the hyperparameters of an ML algorithm regardless of whether this task is conducted manually by a data scientist or automatically by an AutoML system Therefore data scientists and AutoML systems rely on hyperparameter optimization HPO techniques algorithms that automatically identify good hyperparameters for ML algorithms The selection of the HPO technique is of great relevance since it can improve the final performance of an ML model by up to 62 % and reduce its errors by up to 95 % compared to computing with default values As the selection of the HPO technique depends on different domain specific influences it becomes more and more popular to use decision support systems to facilitate this selection Since no approach exists which covers the requirements from the production domain the main research question of this thesis was Can a decision support system be developed that supports in the selecting of HPO techniques in the production domain

*Manufacturing of Polymer Composites* B. Tomas Astrom, 2018-04-27 The potential application areas for polymer composites are vast While techniques and methodologies for composites design are relatively well established the knowledge and understanding of post design issues lag far behind This leads to designs and eventually composites with disappointing properties and unnecessarily high cost thus impeding a wider industrial acceptance of polymer composites *Manufacturing of Polymer Composites* completely covers pre and post design issues While the book enables students to become fully comfortable with composites as a possible materials choice it also provides sufficient knowledge about manufacturing related issues to permit them to avoid common pitfalls and unmanufacturable designs The book is a fully comprehensive text covering all commercially significant materials and manufacturing techniques while at the same time discussing areas of research and development that are nearing commercial reality
