Bifurcation Theory of Impulsive Dynamical Systems Kevin E.M. Church,Xinzhi Liu,2021-03-24 This monograph presents the most recent progress in bifurcation theory of impulsive dynamical systems with time delays and other functional dependence It covers not only smooth local bifurcations but also some non smooth bifurcation phenomena that are unique to impulsive dynamical systems The monograph is split into four distinct parts independently addressing both finite and infinite dimensional dynamical systems before discussing their applications The primary contributions are a rigorous nonautonomous dynamical systems framework and analysis of nonlinear systems stability and invariant manifold theory Special attention is paid to the centre manifold and associated reduction principle as these are essential to the local bifurcation theory Specifying to periodic systems the Floquet theory is extended to impulsive functional differential equations and this permits an exploration of the impulsive analogues of saddle node transcritical pitchfork and Hopf bifurcations Readers will learn how techniques of classical bifurcation theory extend to impulsive functional differential equations and as a special case impulsive differential equations without delays They will learn about stability for fixed points periodic orbits and complete bounded trajectories and how the linearization of the dynamical system allows for a suitable definition of hyperbolicity They will see how to complete a centre manifold reduction and analyze a bifurcation at a nonhyperbolic steady state **Physics and**
