

Solar System Models – Student Guide

Background Material

Review the Geocentric Model background material. The simulation of Ptolemy's model demonstrates the dominate model when Copernicus presented his heliocentric model. Thoroughly review the Heliocentric Model background material.

Question 1: Look at the Animation of the Copernican Solar System, on the "Heliocentrism" page. What relationship do you notice between how fast a planet moves in its orbit and its distance from the Sun? The relationship between how fast a planet moves in its orbit depends on distance.

The closer to the sun the faster the planets move in orbit and the further from the sun slower.

They go in hand with each other.

Question 2: The table below concerns various elongation configurations for a hypothetical superior planet. Complete any missing elongations, terminology, or lettered labels on the drawing where the Sun and Earth are shown.

Extrasolar Planets Stuart G. Clark, 1998-11-24 Provides an overview of the developments in the search for planetary sized bodies orbiting Sun like stars Discusses the formation and evolution of stars and the processes leading to the formation of protoplanetary discs planetesimals embryonic planets and complete planetary systems Also examined are the techniques currently being employed for the detection of extrasolar planets and the results of those searches as well as the theoretical problems posed by giant planets with small orbital radii and those in eccentric orbits brown dwarfs and the possible planets around pulsars The final chapter speculates on finding habitable and inhabited worlds Annotation copyrighted by Book News Inc Portland OR

Extrasolar Planets Hans Deeg, Juan Antonio Belmonte, Antonio Aparicio, 2007-10-18 This 2007 volume presents the lectures from the sixteenth Winter School of the Instituto de Astrofísica de Canarias which was dedicated to extrasolar planets Research into extrasolar planets is one of the most exciting fields of astrophysics and the past decade has seen a research leap from speculations on the existence of planets orbiting other stars to the discovery of around 200 planets to date The book covers a wide range of issues from the state of the art observational techniques used to detect extrasolar planets to the characterizations of these planets and the techniques used in the remote detection of life It also looks at the insights we can gain from our own Solar System and how we can apply them The contributors all of high standing in the field provide a balanced and varied introduction to extrasolar planets for research astronomers and graduate students bridging theoretical developments and observational advances

Planetary Systems Marc Ollivier, Thérèse Encrenaz, Françoise Roques, Franck Selsis, Fabienne Casoli, 2008-11-27 Over the past ten years the discovery of extrasolar planets has opened a new field of astronomy and this area of research is rapidly growing from both the observational and theoretical point of view The presence of many giant exoplanets in the close vicinity of their star shows that these newly discovered planetary systems are very different from the solar system New theoretical models are being developed in order to understand their formation scenarios and new observational methods are being implemented to increase the sensitivity of exoplanet detections In the present book the authors address the question of planetary systems from all aspects Starting from the facts the detection of more than 300 extraterrestrial planets they first describe the various methods used for these discoveries and propose a synthetic analysis of their global properties They then consider the observations of young stars and circumstellar disks and address the case of the solar system as a specific example different from the newly discovered systems Then the study of planetary systems and of exoplanets is presented from a more theoretical point of view The book ends with an outlook to future astronomical projects and a description of the search for life on exoplanets This book addresses students and researchers who wish to better understand this newly expanding field of research

Methods of Detecting Exoplanets Valerio Bozza, Luigi Mancini, Alessandro Sozzetti, 2016-04-12 In this book renowned scientists describe the various techniques used to detect and characterize extrasolar planets or exoplanets with a view to unveiling the tricks of the trade of planet

detection to a wider community The radial velocity method transit method microlensing method and direct imaging method are all clearly explained drawing attention to their advantages and limitations and highlighting the complementary roles that they can play in improving the characterization of exoplanets physical and orbital properties By probing the planetary frequency at different distances and in different conditions these techniques are helping astrophysicists to reconstruct the scenarios of planetary formation and to give robust scientific answers to questions regarding the frequency of potentially habitable worlds Twenty years have passed since the discovery of a Jupiter mass companion to a main sequence star other than the Sun heralding the birth of extrasolar planetary research this book fully conveys the exciting progress that has been achieved during the intervening period **Extrasolar Planets** Patrick Cassen,Tristan Guillot,A. Quirrenbach,2007-05-17

Research on extrasolar planets is one of the most exciting fields of activity in astrophysics In a decade only a huge step forward has been made from the early speculations on the existence of planets orbiting other stars to the first discoveries and to the characterization of extrasolar planets This breakthrough is the result of a growing interest of a large community of researchers as well as the development of a wide range of new observational techniques and facilities Based on their lectures given at the 31st Saas Fee Advanced Course Andreas Quirrenbach Tristan Guillot and Pat Cassen have written up up to date comprehensive lecture notes on the Detection and Characterization of Extrasolar Planets Physics of Substellar Objects Interiors Atmospheres Evolution and Protostellar Disks and Planet Formation This book will serve graduate students lecturers and scientists entering the field of extrasolar planets as detailed and comprehensive introduction *City of Palo Alto Golf Course Corporation, \$1,800,000 Lease Revenue Bonds, Series 1978* ,1978 Extrasolar Planets and Their Host Stars Kaspar von Braun,Tabetha Boyajian,2017-07-18 This book explores the relations between physical parameters of extrasolar planets and their respective parent stars Planetary parameters are often directly dependent upon their stellar counterparts In addition the star is almost always the only visible component of the system and contains most of the system mass Consequently the parent star heavily influences every aspect of planetary physics and astrophysics Drs Kaspar von Braun and Tabetha Boyajian use direct methods to characterize exoplanet host stars that minimize the number of assumptions needed to be made in the process The book provides a background on interferometric techniques for stellar diameter measurements illustrates the authors approach on using additional data to fully characterize the stars provides a comprehensive update on the current state of the field and examines in detail a number of historically significant and well studied exoplanetary systems Planetary Systems Marc Ollivier,Therese Encrenaz,Francoise Roques,Franck Selsis,Fabienne Casoli,2008-12-17 Over the past ten years the discovery of extrasolar planets has opened a new field of astronomy and this area of research is rapidly growing from both the observational and theoretical point of view The presence of many giant exoplanets in the close vicinity of their star shows that these newly discovered planetary systems are very different from the solar system New theoretical models are being developed in order to understand their formation

scenarios and new observational methods are being implemented to increase the sensitivity of exoplanet detections In the present book the authors address the question of planetary systems from all aspects Starting from the facts the detection of more than 300 extraterrestrial planets they first describe the various methods used for these discoveries and propose a synthetic analysis of their global properties They then consider the observations of young stars and circumstellar disks and address the case of the solar system as a specific example different from the newly discovered systems Then the study of planetary systems and of exoplanets is presented from a more theoretical point of view The book ends with an outlook to future astronomical projects and a description of the search for life on exoplanets This book addresses students and researchers who wish to better understand this newly expanding field of research **Extrasolar Planets** Rudolf

Dvorak,2008-06-25 This latest up to date resource for research on extrasolar planets covers formation dynamics atmospheres and detection After a look at the formation of giant planets the book goes on to discuss the formation and dynamics of planets in resonances planets in double stars atmospheres and habitable zones detection via spectra and transits and the history and prospects of ESPs as well as satellite projects Edited by a renowned expert in solar system dynamics with chapters written by the leading experts in the method described from the US and Europe this is an ideal textbook for graduates students in astronomy and astronomers *Exoplanets* Sara Seager,2011-01-15 For the first time in human history we know for certain

the existence of planets around other stars Now the fastest growing field in space science the time is right for this fundamental source book on the topic which will lay the foundation for its continued growth Exoplanets serves as both an introduction for the non specialist and a foundation for the techniques and equations used in exoplanet observation by those dedicated to the field *The New Worlds* Fabienne Casoli,Therese Encrenaz,2007-04-25 Offering an engaging and complete story of the hunt for new worlds this volume fully details the detection and exploration of extrasolar planets It examines the very wide range of extrasolar planets that have been discovered during the past ten years and looks at what can be learned about such planets by studying the bodies in our own solar system It also discusses the formation of planetary systems the way in which such systems may evolve and the final systems of planets that result In addition the authors demonstrate how life might evolve on an extrasolar planet and how such life might be detected Exoplanet Science Strategy National
