Hieroglyph Stories And Visions For A Better Future:

Hieroglyph Ed Finn, Kathryn Cramer, 2023-11-21 Hieroglyph Stories Visions for a Better Future is an anthology of optimistic science fiction from some of today's most hopeful visionaries. This collection could be the shot in the arm our imaginations need. It's an important book and not just for the fiction. Wall Street Journal. Born of an initiative at the Center for Science and the Imagination at Arizona State University, this remarkable collection unites a diverse group of celebrated authors, prominent scientists, and creative visionaries who contributed works of techno-optimism that challenge us to imagine, fully think broadly, and do Big Stuff, reigniting the iconic visions of the golden age of science fiction. Inside this volume are marvels of imagination and possibility, including a steel tower so tall that the stratosphere is just an elevator ride away, a drone-powered Internet, crowd-funded robots descending on the moon, cities that work like a single cell of algae powered entirely by the sun, and much more. Engaging, mind-bending, provocative, and imaginative. Hieroglyph Stories and Visions for a Better Future offers a forward-thinking approach to the intersection of art and technology that has the power to change our world. Introduction by editors Ed Finn and Kathryn Cramer. Foreword by Lawrence M. Krauss. Interview with Paul Davies. Stories by Charlie Jane Anders, Madeline Ashby, Elizabeth Bear, Gregory Benford, David Brin, James L. Cambias, Brenda Cooper, Cory Doctorow, Kathleen Ann Goonan, Lee Konstantinou, Geoffrey A. Landis, Annalee Newitz, Rudy Rucker, Karl Schroeder, Viranda Singh, Neal Stephenson, and Bruce Sterling.

The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education National Academies of Sciences, Engineering, and Medicine, Policy and Global Affairs, Board on Higher Education and Workforce, Committee on Integrating Higher Education in the Arts, Humanities, Sciences, Engineering, and Medicine, 2018-06-21. In the United States, broad study in an array of different disciplines—arts, humanities, science, mathematics, engineering—as well as an in-depth study within a special area of interest have been defining characteristics of a higher education. But over time, in-depth study in a major discipline has come to dominate the curricula at many institutions. This evolution of the curriculum has been driven in part by increasing specialization in the academic disciplines. There is little doubt that disciplinary specialization has helped produce many of the achievements of the past century. Researchers in all academic disciplines have been able to delve more deeply into their areas of expertise, grappling with ever more specialized and fundamental problems. Yet today many leaders, scholars, parents, and students are asking whether higher education has moved too far from its integrative tradition towards an approach heavily rooted in disciplinary silos. These silos represent what many see as an artificial separation of academic disciplines. This study reflects a growing concern that the approach to higher education that favors disciplinary specialization is poorly calibrated to the challenges and opportunities of our time. *The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education* examines the evidence behind the assertion that educational programs that mutually integrate learning experiences in the humanities and arts with science, technology, engineering, mathematics, and medicine (STEMM) lead

to improved educational and career outcomes for undergraduate and graduate students It explores evidence regarding the value of integrating more STEM curricula and labs into the academic programs of students majoring in the humanities and arts and evidence regarding the value of integrating curricula and experiences in the arts and humanities into college and university STEM education programs

Evil Geniuses Kurt Andersen, 2020-08-11 NEW YORK TIMES BESTSELLER When did America give up on fairness The author of *Fantasyland* tells the epic history of how America decided that big business gets whatever it wants only the rich get richer and nothing should ever change and charts a way back to the future Essential absorbing a graceful authoritative guide a radicalized moderate s moderate case for radical change The New York Times Book Review During the twentieth century America managed to make its economic and social systems both more and more fair and more and more prosperous A huge secure and contented middle class emerged All boats rose together But then the New Deal gave way to the Raw Deal Beginning in the early 1970s by means of a long war conceived of and executed by a confederacy of big business CEOs the superrich and right wing zealots the rules and norms that made the American middle class possible were undermined and dismantled The clock was turned back on a century of economic progress making greed good workers powerless and the market all powerful while weaponizing nostalgia lifting up an oligarchy that served only its own interests and leaving the huge majority of Americans with dwindling economic prospects and hope Why and how did America take such a wrong turn In this deeply researched and brilliantly woven cultural economic and political chronicle Kurt Andersen offers a fresh provocative and eye opening history of America s undoing naming names showing receipts and unsparingly assigning blame to the radical right in economics and the law the high priests of high finance a complacent and complicit Establishment and liberal useful idiots among whom he includes himself Only a writer with Andersen s crackling energy deep insight and ability to connect disparate dots and see complex systems with clarity could make such a book both intellectually formidable and vastly entertaining And only a writer of Andersen s vision could reckon with our current high stakes inflection point and show the way out of this man made disaster

The Nature of Tomorrow Michael Rawson, 2021-11-16 An examination of how Western visions of endless future growth have contributed to the global environmental crisis For centuries the West has produced stories about the future in which humans use advanced science and technology to transform the earth Michael Rawson uses a wide range of works that include Francis Bacon s *New Atlantis* the science fiction novels of Jules Verne and even the speculations of think tanks like the RAND Corporation to reveal the environmental paradox at the heart of these narratives the single minded expectation of unlimited growth on a finite planet Rawson shows how these stories which have long pervaded Western dreams about the future have helped to enable an unprecedentedly abundant and technology driven lifestyle for some while bringing the threat of environmental disaster to all Adapting to ecological realities

he argues hinges on the ability to create new visions of tomorrow that decouple growth from the idea of progress
