Linear algebra is one of the central disciplines in mathematics. A student of pure mathematics must know linear algebra if he is to continue with modern algebra or functional analysis. Much of the mathematics now taught to engineers and physicists requires it. This well known and highly regarded text makes the subject accessible to undergraduates with little mathematical experience. Written mainly for students in physics, engineering, economics and other fields outside mathematics, the book gives the theory of matrices and applications to systems of linear equations as well as many related topics such as determinants, eigenvalues and differential equations.
