Intelligent Control in Drying Alex Martynenko,Andreas Bück,2018-09-03 Despite the available general literature in intelligent control there is a definite lack of knowledge and know how in practical applications of intelligent control in drying This book fills that gap Intelligent Control in Drying serves as an innovative and practical guide for researchers and professionals in the field of drying technologies providing an overview of control principles and systems used in drying operations from classical to model based to adaptive and optimal control At the same time it lays out approaches to synthesis of control systems based on the objectives and control strategies reflecting complexity of drying process and material under drying This essential reference covers both fundamental and practical aspects of intelligent control sensor fusion and dynamic optimization with respect to drying

Advanced Intelligent

Computing Theories and Applications: With Aspects of Artificial Intelligence De-Shuang Huang,Xiang Zhang,Carlos Alberto Reyes Garcia,Lei Zhang,2010-07-30 The International Conference on Intelligent Computing ICIC was formed to provide an annual forum dedicated to the emerging and challenging topics in artificial intelligence machine learning pattern recognition image processing bioinformatics and computational biology It aims to bring together researchers and practitioners from both academia and industry to share ideas problems and solutions related to the multifaceted aspects of intelligent computing ICIC 2010 held in Changsha China August 18 21 2010 constituted the 6th International Conference on Intelligent Computing It built upon the success of ICIC 2009 ICIC 2008 ICIC 2007 ICIC 2006 and ICIC 2005 that were held in Ulsan Korea Shanghai Qingdao Kunming and Hefei China respectively This year the conference concentrated mainly on the theories and methodologies as well as the emerging applications of intelligent computing Its aim was to unify the picture of contemporary intelligent computing techniques as an integral concept that highlights the trends in advanced computational intelligence and bridges theoretical research with applications Therefore the theme for this conference was Advanced Intelligent Computing Technology and Applications Papers focusing on this theme were solicited addressing theories methodologies and applications in science and technology

Intelligent Control Nazmul Siddique,2013-11-29 Intelligent Control considers non traditional modelling and control approaches to nonlinear systems Fuzzy logic neural networks and evolutionary computing techniques are the main tools used The book presents a modular switching fuzzy logic controller where a PD type fuzzy controller is executed first followed by a PI type fuzzy controller thus improving the performance of the controller compared with a PID type fuzzy controller The advantage of the switching type fuzzy controller is that it uses one rule base thus minimises the rule base during execution A single rule base is developed by merging the membership functions for change of error of the PD type controller and sum of error of the PI type controller Membership functions are then optimized using evolutionary algorithms Since the two fuzzy controllers were executed in series necessary further tuning of the differential and integral scaling factors of the controller is then performed Neural network based tuning for the scaling parameters of the fuzzy controller is then described and finally an evolutionary algorithm is applied to the neurally tuned fuzzy controller in which the sigmoidal function shape of the neural network is determined The important issue of stability is addressed and the text demonstrates empirically that the developed controller was stable within the operating range The text concludes with ideas for future research to show the reader the potential for further study in this area Intelligent Control will be of interest to researchers from engineering and computer science backgrounds working in the intelligent and adaptive control
