Handbook of Waste Biorefinery Eduardo Jacob-Lopes, Leila Queiroz Zepka, Mariany Costa Deprá, 2022-09-01 This handbook discusses the latest developments in biorefinery technologies for waste to energy conversion. The growing global population and the accompanying increase in consumption and waste production make it urgent to find the best possible use of our resources. A sustainable waste management under the biorefinery concept has great potential to support a sustainable circular economy and green energy production. This handbook is divided into four parts. First, the reader is introduced to the fundamentals and recent trends of waste to energy technologies. The second part describes in detail the current status, challenges, and potential of the different feedstocks used for waste to energy conversion. Here, municipal solid waste, sewage sludge, oils, and greases generated during food preparation, industrial wastewaters, and agricultural wastes, to name a few, are introduced. In the third part, numerous waste to energy technologies are discussed in detail, including anaerobic digestion, composting, gasification, plasma technology, thermal cracking, and others. Advantages and optimization potentials of these technologies for efficient residue management, quality, and yield are highlighted. Finally, the handbook discusses social, environmental, and economic aspects of waste to energy biorefinery technologies. Readers will learn more about the major bottlenecks and solutions in bioenergy commercialization, the logistics of biomass supply, and the carbon footprint of waste biorefineries. The ideas and technologies presented in this book contribute to the UN Sustainable Development Goal (SDG) of Affordable and Clean Energy. This book is a useful reference for postgraduate students and researchers interested in biorefinery and biofuel technologies, both in academia and commercial laboratories. Early career scientists can use it to fast track into the field. Advanced scientists will find it helpful in gaining a broader overview of the field beyond their area of specialization.

Research Handbook on the Law of Virtual and Augmented Reality Woodrow Barfield, Marc Jonathan Blitz, 2018-12-28 Virtual and augmented reality raise significant questions for law and policy. When should virtual world activities or augmented reality images count as protected First Amendment speech, and when are they instead a nuisance or trespass? When does copying them infringe intellectual property laws? When should a person or computer face legal consequences for allegedly harmful virtual acts? The Research Handbook on the Law of Virtual and Augmented Reality addresses these questions and others, drawing upon free speech doctrine, criminal law, issues of data protection and privacy, legal rights for increasingly intelligent avatars, and issues of jurisdiction within virtual and augmented reality worlds.
