Building a Website: Understanding the Basics of HTML and CSS

1. Introduction to HTML and CSS

Web design involves creating a visual representation of a website using HTML and CSS. HTML (Hypertext Markup Language) is the backbone of a website, while CSS (Cascading Style Sheets) is used to style and format the content.

This document is designed to help you understand the basics of HTML and CSS. It covers the following topics:

- What is HTML and CSS?
- How to create a simple website using HTML and CSS.
- How to style a website using CSS.
- How to create a responsive website using CSS.

The document is divided into two main sections: HTML and CSS. The HTML section covers the basics of HTML, including how to create a simple website using HTML. The CSS section covers the basics of CSS, including how to style a website using CSS.

2. HTML Basics

HTML (Hypertext Markup Language) is a markup language used to create web pages. It consists of a series of elements that are used to structure and format the content of a web page. The most common HTML elements are the following:

- Headings:** Used to create titles and subtitles for sections of a web page.
- Paragraphs:** Used to create blocks of text.
- Links:** Used to create hyperlinks that point to other web pages.
- Images:** Used to insert images into a web page.
- Tables:** Used to create tables of data.
- Forms:** Used to create input fields for user data.

3. CSS Basics

CSS (Cascading Style Sheets) is a style sheet language used to describe the look and formatting of a document written in HTML. It is used to control the layout, colors, and fonts of a web page. The most common CSS properties are the following:

- Color:** Used to set the color of text or background.
- Font:** Used to set the font family, size, and weight of text.
- Text:** Used to set the text alignment, line height, and letter spacing.
- Background:** Used to set the background color and image.
- Border:** Used to set the border width, style, and color.
- Margin:** Used to set the margin between elements.
- Padding:** Used to set the padding between elements.
- Position:** Used to set the position of an element relative to its parent or the document.
- Display:** Used to set the display type of an element.
- Float:** Used to float an element to the left or right of the page.
- Clear:** Used to clear a float.
- Visibility:** Used to set the visibility of an element.
- Opacity:** Used to set the opacity of an element.
- Transform:** Used to transform an element.
- Transition:** Used to create a smooth transition between two states.
- Animation:** Used to create an animation.
