

MANUAL FOR PROBLEM BEHAVIOUR CHECKLIST

INTRODUCTION

Emotional and behavioural disorders are common in childhood and adolescence. The special features of children's psychiatric problems are that the disturbance in the child may result from problems in other members of the family, especially the parents. Another aspect is whether the behaviour, which is considered abnormal, is related to the child's stage of development. There are many types of disorders, which have many common symptoms. Since the child depends a great deal on the family, especially on the mother for a stable, secure family environment which facilitates emotional bond, acceptance and consistent discipline, a lack in any of these aspects may predispose the child to emotional and conduct disorders. (1985). The most common assessment strategy is the self-report questionnaire, which are designed to represent dysfunction in different areas of behaviour. Higher scores on such questionnaires indicate that the individual endorses more items reflecting the type of cognition and behaviour the scale measured. Higher levels of endorsement correlate with measures of psychopathology. The literature in this regard is filled with Construct specific scales and their relation to certain types of psychopathology (Linscott & DiGiuseppe, 1988). Several behaviour problem checklists in which parents are asked to rate their child's behaviours have been developed and extensively studied. For example, one such checklist is "Child
