The process of shifting the ribosome down the mRNA to read new codons is termed \_\_\_\_\_ - ✓✓ Translocation

\_\_\_\_\_ is the enzyme that transcribes DNA into RNA -  
✓✓ RNA Polymerase

Which two of the following statements regarding tRNA structure are correct? - ✓✓ - tRNA has regions that are double-stranded RNA.

- The overall structure is termed a cloverleaf.

Horizontal gene transfer - ✓✓ Transfer of DNA from a source other than the parent organisms.

Vertical gene transfer - ✓✓ Transfer of DNA from parent organisms during reproduction.

True or False: Operons are found in fungi and helminths. - ✓✓ False

A(n) \_\_\_\_\_ is the specific sequence of 3 mRNA nucleotides, based on DNA triplet, that encodes a particular amino acid. - ✓✓ codon

How does RNA differ from DNA in bacteria and eukaryotes? - ✓✓ - RNA is single-stranded

- in RNA, uracil replaces thymine

Match the number of genes with the typical organism that carries them in its genome. - ✓✓ A few dozen - virus

## **Microbial Genetics Question Model:**

**The Microbial Models of Molecular Biology** Rowland H. Davis, 2003-09-11 This book explains the role of simple biological model systems in the growth of molecular biology Essentially the whole history of molecular biology is presented here tracing the work in bacteriophages in E coli the role of other prokaryotic systems and also the protozoan and algal models Paramecium and Chlamydomonas primarily and the move into eukaryotes with the fungal systems Neurospora Aspergillus and yeast Each model was selected for its appropriateness for asking a given class of questions and each spawned its own community of investigators Some individuals made the transition to a new model over time and remnant communities of investigators continue to pursue questions in all these models as the cutting edge of molecular biological research flowed onward from model to model and onward into higher organisms and ultimately mouse and man

*Anthropogenic Impacts on the Microbial Ecology and Function of Aquatic Environments* Maurizio Labbate, Justin R. Seymour, Federico Lauro, Mark V. Brown, 2016-09-06 Aquatic ecosystems are currently experiencing unprecedented levels of impact from human activities including over exploitation of resources habitat destruction pollution and the influence of climate change The impacts of these activities on the microbial ecology of aquatic environments are only now beginning to be defined One of the many implications of environmental degradation and climate change is the geographical expansion of disease causing microbes such as those from the *Vibrio* genus Elevating sea surface temperatures correlate with increasing *Vibrio* numbers and disease in marine animals e g corals and humans Contamination of aquatic environments with heavy metals and other pollutants affects microbial ecology with downstream effects on biogeochemical cycles and nutrient turnover Also of importance is the pollution of aquatic environments with antibiotics resistance genes and the mobile genetic elements that house resistance genes from human and animal waste Such contaminated environments act as a source of resistance genes long after an antibiotic has ceased being used in the community Environments contaminated with mobile genetic elements that are adapted to human commensals and pathogens function to capture new resistance genes for potential reintroduction back into clinical environments This research topic encompasses these diverse topics and describes the affect s of human activity on the microbial ecology and function in aquatic environments and describes methods of restoration and for modelling disturbances

*Lactic Acid Bacteria: Genetics, Metabolism and Applications* Roland J. Siezen, Jan Kok, Tjakko Abee, Gertjan Schaafsma, 2013-06-29 Foods fermented with lactic acid bacteria are an important part of the human diet Lactic acid bacteria play an essential role in the preservation of food raw materials and contribute to the nutritional organoleptic and health properties of food products and animal feed The importance of lactic acid bacteria in the production of foods throughout the world has resulted in a continued scientific interest in these micro organisms over the last two decades by academic research groups as well as by industry This research has resulted in a number of important scientific breakthroughs and has led to new applications The most recent of these advances is the establishment of the complete genome sequences of a number of different lactic acid bacterial species To communicate and stimulate the research on lactic acid bacteria and their applications a series of tri annual symposia on lactic acid bacteria was started in 1983 under the auspices of the Netherlands Society for Microbiology NVVM which was later also supported by the Federation of European Microbiological Societies FEMS The aim of these state of the art symposia is to offer a unique platform for universities institutes and industry in this area of biotechnology to present recent work to obtain information on new developments and to exchange views with colleagues from all over the world on scientific progress and applications The growing number of participants at these symposia has been a clear demonstration of the interest of the international industrial and scientific community in this area of research The 7th Symposium is based on a number of plenary lectures that review the scientific progress of the last years in the different areas of research on lactic acid bacteria and which are
