The Living World: Ecosystems Teacher's KEY

The first unit of AP Environmental Science will introduce and/or reacquaint you with the ecology of the Earth. We will cover ecosystems, biomes, the biogeochemical cycles, food chains, and food webs.

art 1: Short Answer Questions

1.0	Describe abiotic & biotic factors in ecosystems, and give examples of energy converting from one form to another.
	1. **State the First Law of Thermodynamics.** Energy is neither created nor destroyed, but transferred. 2. **What is the main difference between kinetic and potential energy?** Potential energy is stored, kinetic energy is in motion. 3. **What is the difference between a community and an ecosystem?** A community consists of all the populations of living things in an area. An ecosystem includes the community and the abiotic factors. 4. **Give two examples of biotic factors and two examples of abiotic factors in a pond ecosystem.** Biotic = bacteria, algae Abiotic = Dissolved oxygen levels, water temperature 5. **Why is the Gray Wolf in Yellowstone considered a keystone species?** Gray wolves are top predators. Their presence influences the health of the ecosystem as they prevent grazing animals from becoming overpopulated, and alter their behavior.
1.1	Explain how the availability of resources influences species interactions.
	6. **Define resource partitioning and give an example.** Resource partitioning mitigates competition. It involves using a resource in different ways, at different times, or different parts. For example, many species of warbler can occupy the same tree since they use different parts of the resource. 7. **Give an example of a mutualistic interspecific interaction.** Mutualism = both species benefit. For example, coral reefs and zooxanthellae algae in their tissues. 8. **Give an example of commensalism.** One benefits and the other is not affected. For example, Cactus wren nesting on a cactus. 9. **Give an example of a parasitic symbiotic relationship.** The parasite benefits while the host is harmed (usually weakened). For example, dogfish shark and tapeworms.
1.2	Describe the global distribution and principal environmental aspects of terrestrial biomes.
	10. **How are terrestrial biomes characterized?** Climate (long term patterns of temperature and precipitation) and dominant vegetation 11. **Describe the taiga biome and the community found there.** Taiga is a cold, northern coniferous forest. There are well-defined seasons in this sub-arctic biome. Animals living there have adapted to the cold, snowy winters. Lichens, mosses, and needleleaves are found on the forest floor. A permafrost layer is found in the soil. 12. **How do desert plants and animals survive?** Adaptations to survive a lack of water. 13. **Why does a thick layer of decaying leaf litter typically cover the floors of temperate deciduous forests?** In deciduous forests, trees lose their leaves seasonally.
