Handwriting Jean Alston, Jane Taylor, 2024-11-01 First Published in 1987 Handwriting reviews theory and research on handwriting and on children who have handwriting problems and draws out principles and recommendations for practitioners. The practitioners will include teachers, educational advisors, psychologists and occupational and physical therapists. There has been a revival in the teaching of the basic school skills of reading, writing and number. Surprisingly however there are very few books concerning the manipulative skills of handwriting and this book seeks to fill this major gap. While much of the book is concerned with the development and teaching of handwriting skills in ordinary children, it also gives detailed consideration to the problems encountered by children with physical disabilities. This is an interesting read for students of education.

Graphonomics
H.S.R. Kao, R. Hoosain, G.P. Van Galen, 1986-09-01. Graphonomics is the newly created term for the science of handwriting and other graphic skills. The Second International Conference on the Neural and Motor Aspects of Handwriting attracted contributions from experimental psychologists, neuropsychologists, neurologists, linguists, biophysicists, and computer scientists from 12 countries. This volume, the proceedings of the conference, features clinical studies of the neural basis of agraphia and dysgraphia from brain-damaged patients. The motor aspects of handwriting are further extended to new areas of interests. Research on handwriting in the English, Chinese, and Japanese languages forms the first attempt in the field to investigate handwriting from the psycholinguistic perspective of different languages.
