**Resources in Education**, 1990-08 Gender and Fair Assessment Warren W. Willingham, Nancy S. Cole, 2013-12-16 There have been many important changes in the participation of women and men in American society over the past quarter century Tests play a role in those changes by providing evidence of the diverse achievement and proficiency of women and men They aid the learning process and reflect inequalities in opportunity to learn and participate In addition they provide useful information in considering what alternatives in education and work make most sense for individuals and influence views about groups of students educational programs and a wide range of issues For all of these reasons it is important that tests assess fairly and reflect accurately the ways young people are and are not achieving as well as desired The test performance of women and men is a research topic of historical interest and has received much attention in recent years Because of this increased interest there is a great deal of new research and data available The purpose of the study presented in this volume was to review this new information with two objectives in mind to clarify patterns of gender difference and similarity in test performance and related achievements and to see what implications those findings might have for fair assessment and as a corollary examine the assessment process as a possible source of gender differences This study is interested in tests used in education to assess developed knowledge and skill In order to gain a broader view of gender similarity and difference the contributors looked at other types of measures and other characteristics of young women and men Their hope is to contribute to a firmer basis for insuring fairness in tests an objective which is particularly important as the field moves increasingly to new forms of assessment in which there is less experience A Polygeneration Process Concept for Hybrid Solar and Biomass Power Plant Umakanta Sahoo, 2018-08-09 This is the most comprehensive and in depth study of the theory and practical applications of a new and groundbreaking method for the energy industry to go green with renewable and alternative energy sources The global warming phenomenon as a significant sustainability issue is gaining worldwide support for development of renewable energy technologies The term polygeneration is referred to as an energy supply system which delivers more than one form of energy to the final user For example electricity cooling and desalination can be delivered from a polygeneration process The polygeneration process in a hybrid solar thermal power plant can deliver electricity with less impact on the environment compared to a conventional fossil fuel based power generating system It is also THE next generation energy production technique with the potential to overcome the undesirable

intermittence of renewable energy systems In this study the polygeneration process simultaneous production of power vapor absorption refrigeration VAR cooling and multi effect humidification and dehumidification MEHD desalination system from different heat sources in hybrid solar biomass HSB system with higher energy efficiencies energy and exergy primary energy savings PES and payback period are investigated focusing on several aspects associated with hybrid solar biomass power generation installations such as wide availability of biomass resources and solar direct normal irradiance DNI and other technologies Thermodynamic evaluation energy and exergy of HSB power has also been investigated along with the VAR cooling system the modelling simulation optimization and cost analysis of the polygeneration hybrid solar biomass system all accompanied by multiple case studies and examples for practical applications This volume provides the researcher student and engineer with the intellectual tool needed for understanding new ideas in this rapidly emerging field The book is also intended to serve as a general source and reference book for the professional consultant designer contractor etc who is working in the field of solar thermal biomass power plant polygeneration cooling and process heat It is a must have for anyone working in this field
