

PROTEIN SYNTHESIS

PROTEIN SYNTHESIS COOKIE LAB

Objective

Students will process all protein synthesis by using a model recipe (flour) to make a protein (cookie recipe).

Background

Each student will represent all three related genes to make specific proteins. These proteins then interact with each other to make a functional protein.

Today we will walk through the process of creating a gene, transcribing it into mRNA, and then translating it into a protein. This activity is designed to help you understand the process of protein synthesis.

Procedure

1. Read the recipe and make your protein (cookie recipe). **Remember** that each gene is a different recipe for a different protein.
2. Once you have finished your gene recipe, create a protein (cookie) and add it to the protein bank. The protein bank is a container that holds all the proteins that are made in your class.
3. Each student will be assigned a specific protein to make. The protein bank will be used to make the protein.
4. Each student will be assigned a specific protein to make. The protein bank will be used to make the protein.
5. Each student will be assigned a specific protein to make. The protein bank will be used to make the protein.
6. Each student will be assigned a specific protein to make. The protein bank will be used to make the protein.
7. Each student will be assigned a specific protein to make. The protein bank will be used to make the protein.
8. Each student will be assigned a specific protein to make. The protein bank will be used to make the protein.

For Lab Questions

1. What is the purpose of the protein bank?
2. What is the purpose of the protein bank?

Catalog of Copyright Entries. Third Series Library of Congress. Copyright Office, 1979 **Argument-driven**

Inquiry in Biology Victor Sampson, 2014-04-01 Are you interested in using argument driven inquiry for high school lab instruction but just aren't sure how to do it? You aren't alone! This book will provide you with both the information and instructional materials you need to start using this method right away. *Argument Driven Inquiry in Biology* is a one-stop source of expertise, advice, and investigations. The book is broken into two basic parts: 1. An introduction to the stages of argument-driven inquiry from question identification, data analysis, and argument development and evaluation to double-blind peer review and report revision. 2. A well-organized series of 27 field-tested labs that cover molecules and organisms, ecosystems, heredity, and biological evolution. The investigations are designed to be more authentic scientific experiences than traditional laboratory activities. They give your students an opportunity to design their own methods, develop models, collect and analyze data, generate arguments, and critique claims and evidence. Because the authors are veteran teachers, they designed *Argument Driven Inquiry in Biology* to be easy to use and aligned with today's standards. The labs include reproducible student pages and teacher notes. The investigations will help your students learn the core ideas, crosscutting concepts, and scientific practices found in the Next Generation Science Standards. In addition, they offer ways for students to develop the disciplinary skills outlined in the Common Core State Standards. Many of today's teachers like you want to find new ways to engage students in scientific practices and help students learn more from lab activities. *Argument Driven Inquiry in Biology* does all of this even as it gives students the chance to practice reading, writing, speaking, and using math in the context of science.

Current Topics in Cellular Regulation Bernard L. Horecker, Earl R. Stadtman, 2014-06-28 *Current Topics in Cellular Regulation* Volume 21 examines the advances in the general area of cellular regulation. This book discusses the roles of eukaryotic initiation factor 2, ancillary factors in the regulation of eukaryotic protein synthesis initiation, and phosphorylation state of eIF 2. The monoclonal antibodies to cap-binding proteins, criteria for establishment of the biological significance of ribosomal protein phosphorylation, and comparison with casein kinases from mammary gland are also elaborated. This text likewise covers the regulation of phosphoprotein phosphatases, poly ADP-ribosylation reactions in vitro.

and induced commitment to terminal erythroid differentiation Other topics include the turnover characteristics of lactate dehydrogenase and role of urea synthesis in the removal of metabolic bicarbonate and regulation of blood pH This volume is useful to biologists and researchers interested in basic mechanisms involved in the regulation of diverse cellular activities
