section about conversions between measuring units such as changing three meters into centimeters or two feet into inches. Even though conversions between units belong to 4th grade in the Common Core Standards I have included some easy conversion problems because I feel many third graders are ready for them. We all use various measuring units in our everyday lives and using them is the key to remembering what they are, how big they are, and what the conversion factors are. Naturally, people in the United States do not use the metric system a lot, while people elsewhere do not use the customary system. The units your child does not use are likely to be forgotten easily. Encourage your student(s) to spend his free play time with measuring devices such as a scale, measuring cups, measuring tapes, and rulers.
