La Niña and the Making of Climate Optimism Julia Miller,2019-07-12 This book examines the deep connection Australians have with their climate to understand contemporary views on human induced climate change It is the first study of the Australian relationship with La Ni a and it explains how fundamental this relationship is to the climate change debate both locally and globally While unease with the Australian environment was a hallmark of early settler relations with a new continent this book argues that the climate itself quickly became a source of hope and linked to progress Once observed weather patterns coalesced into recognizable cycles of wet and dry years and Australians adopted a belief in the certainty of good seasons It was this optimistic response to climate linked to La Ni a that laid the groundwork for this relationship with the Australian environment This book will appeal to scholars and students of the environmental humanities history and science as well as anyone concerned about climate change
