Strom, Adrian D. Martin, 2017-01-28 This book presents an empirical study utilizing Deleuzian Dominant conceptions in the field of education position teacher development and teaching as linear cause and effect transactions completed by teachers as isolated autonomous actors Yet rhizomatics an emergent non linear philosophy created by Gilles Deleuze and Felix Guattari offers a perspective that counters these assumptions that reduce the complexity of classroom activity and phenomena In Becoming Teacher A Rhizomatic Look at First Year Teaching Strom and Martin employ rhizomatics to analyze the experiences of Mauro Bruce and June three first year science teachers in a highly diverse urban school district Reporting on the ways that they constructed their practices during the first several months of entry into the teaching profession authors explore how these teachers negotiated their pre professional learning from an inquiry and social justice oriented teacher residency program with their own professional agendas understandings students and context Across all three cases the work of teaching emerged as jointly produced by the activity of multiple elements and simultaneously shaped by macro and micropolitical forces This innovative approach to investigating the multiple interactions that emerge in the first year of teaching provides a complex perspective of the role of preservice teacher learning and the non linear processes of becoming teacher Of interest to teachers teacher educators and education researchers the cases discussed in this text provide theoretically informed analyses that highlight means of supporting teachers in enacting socially just practices interrupting a dominant educational paradigm detrimental to students and teachers and engaging with productive tools to theorize a resistance to the neoliberal education movement at the classroom level **Scholarship for Sustaining Service-Learning and Civic Engagement** Shelley H. Billig, Melody A. Bowdon, Barbara A. Holland, 2008-11-01 This eighth volume in the Advances in Service Learning Research series includes eight essays selected from manuscripts submitted by participants in the seventh annual conference of the International Association of Research in Service Learning and Community Engagement held in Tampa Florida in October 2007 The volume builds upon the theme of that conference Sustainability and Scholarship Research and the K 20 Continuum bringing together the work of scholars from K 12 and higher education to argue for the connection between rigorous and purposeful research and sustainable service learning and civic engagement Articles range from models for program level assessment to examples of significant field based research projects to approaches to advance discipline based sustainable impacts to connections between civic education and sustainable communities Voices of community partners students faculty members administrators and discipline based organizations are part of the conversation and each of the essays raises important challenges for future research that can help to shape document and sustain the important impacts of work in this field **Teaching Science and Investigating**

Environmental Issues with Geospatial Technology James MaKinster, Nancy Trautmann, Michael Barnett, 2013-11-05 The emerging field of using geospatial technology to teach science and environmental education presents an excellent opportunity to discover the ways in which educators use research grounded pedagogical commitments in combination with their practical experiences to design and implement effective teacher professional development projects Often missing from the literature are in depth explicit discussions of why and how educators choose to provide certain experiences and resources for the teachers with whom they work and the resulting outcomes The first half of this book will enable science and environmental educators to share the nature and structure of large scale professional development projects while discussing the theoretical commitments that undergird their work Many chapters will include temporal aspects that present the ways in which projects change over time in response to evaluative research and practical experience In the second half of the book faculty and others whose focus is on national and international scales will share the ways in which they are working to meet the growing needs of teachers across the globe to incorporate geospatial technology into their science teaching These efforts reflect the ongoing conversations in science education geography and the geospatial industry in ways that embody the opportunities and challenges inherent to this field This edited book will serve to define the field of teacher professional development for teaching science using geospatial technology As such it will identify short term and long term objectives for science environmental and geography educators involved in these efforts As a result this book will provide a framework for future projects and research in this exciting and growing field
