Plant Nutrition for Sustainable Food Production and Environment Tadao Ando, Kounosuke Fujita, Tadahiko Mae, Hideaki Matsumoto, Satoshi Mori, Jiro Sekiya, 1997-12-31 In the history of the International Plant Nutrition Colloquium from its first meeting in 1954 this meeting the 13th Colloquium is the first to be held in Asia and will be the last in the 20th century The 20th century has seen huge changes in the number and activities of mankind Our population has increased from around 1.7 billion to more than 5.8 billion and technological innovations have completely altered our way of living As a consequence of such rapid change we are facing many problems including changes in our environment of a global scale But while food shortage has been a serious concern to mankind throughout our history serious food shortages in the 20th century have been confined to limited times and areas As Lester Brown discusses in this volume farmers have increased food production heroically on demand We the plant nutritionists should be proud of our support to the world's farmers which has helped them make their achievement possible During the 20th century the science of plant nutrition also has achieved great progress as described by Jack Loneragan it became established as a discipline firmly based in science defined the chemical elements supporting plant growth and has contributed to improvements in plant production and environmental quality as readers will find in many contributions in this volume *Development and Activities of Roots of Crop Plants* John Ernest Weaver, Frank Covert Jean, John W. Crist, 1922 *Growth and Mineral Nutrition of Field Crops* N. K. Fageria, V. C. Baligar, C. Allan Jones, 1991 Emphasizing soil as the substrate for plant growth this volume examines climate soil plant relationships governing growth and mineral nutrition of most vital temperate and tropical field crops around the world including cereal legume and pasture crops Covers recent studies of genetic physiology **Leveraging Phenotyping and Crop Modeling in Smart Agriculture** Ting Sun, Wenyu Zhang, Syed Tahir Ata-Ul-Karim, Yuntao Ma, Liu Jun Xiao, 2025-08-20 In recent years the agriculture sector has witnessed a significant transformation due to the integration of digital technologies and data driven methodologies leading to the emergence of smart agriculture Advanced agricultural technologies notably high throughput phenotyping and crop modeling have fundamentally altered our understanding and management of crops Phenotyping allows for precise characterization of plant traits while crop modeling provides predictive insights into crop growth and yield based on a diverse set of environmental parameters In many contexts phenotyping and modeling are closely intertwined phenotypic data forms the foundation for modeling and models offer quantifiable tools for analyzing complex traits The convergence of these domains presents an exciting opportunity to optimize agricultural practices enhance resource efficiency and make substantial contributions to global food security This research topic aims to seamlessly integrate phenotyping and modeling essential components in smart agriculture to address urgent challenges like sustainable food production amidst a growing global population and to optimize resource utilization The key challenge is the fragmented use and insufficient integration of

high throughput phenotyping and advanced crop modeling The cohesive fusion of these technologies can revolutionize crop management offering predictive analytics for optimized resource allocation enhanced productivity and environmental sustainability Recent strides in sensor tech machine learning and computational modeling provide a strong foundation for a refined integration of phenotyping and modeling enabling real time data driven decisions for farmers This research strives to bridge the gap between phenotyping and crop modeling aiming for a transformative approach in smart agriculture to ensure sustainability and food security
