Gas Turbine Powerhouse Dietrich Eckardt, 2013-12-20 This book tells the story of the power generation gas turbine from the perspective of one of the leading companies in the field over a period of nearly 100 years written by an engineer. Especially in times of imminent global economic crises it appears to be worthwhile to reflect on real economic values based on engineering ingenuity and enduring management of technological leadership. Though the book is primarily designed as a technical history of the BBC ABB Alstom power generation gas turbines its scope is sufficiently broad to cover general development trends including parallel competitor activities. A special benefit is the historical breakdown to the gas turbine component level so that the book actually outlines the development of axial compressors from early beginnings the progress in combustion technology towards extraordinary low emission values and that of axial turbines with special emphasis on early turbine cooling innovations. The sheer length of certain engineering developments over several decades allows interesting historic observations and deductions on inherent business mechanisms the effects of technology preparations and organisational consequences. A look into the mirror of the past provides revelations on the impact of far reaching business decisions.

Ecotoxicology and Genotoxicology Marcelo L Larramendy, 2017-06-12 The potential impact of anthropogenic pollutants such as agrochemicals on the environment is of global concern. Increasing use of certain compounds can result in contamination of food water and atmospheric systems and in order to combat this pollution it is important to be able to accurately monitor the short and long term effects. This book describes the latest non traditional terrestrial species models used as indicators of the toxic effects of environmental pollutants. The book enables understanding of the effects of pollutants in non target species and therefore enables analysis of the effects on ecosystems. This book will be of interest to anyone interested in developing new biomarker species with high degrees of ecological relevance. It will serve as a useful resource for regulatory and research toxicologists particularly those interested in soil screening and the effects of pollutants on wildlife and insects and their use as biological indicators.
