Handbook Of Cognition And Aging:

The Cambridge Handbook of Cognitive Aging Ayanna K. Thomas, Angela Gutchess, 2020-05-28 Decades of research have demonstrated that normal aging is accompanied by cognitive change. Much of this change has been conceptualized as a decline in function. However, age-related changes are not universal, and decrements in older adult performance may be moderated by experience, genetics, and environmental factors. Cognitive aging research to date has also largely emphasized biological changes in the brain with less evaluation of the range of external contributors to behavioral manifestations of age-related decrements in performance. This handbook provides a comprehensive overview of cutting edge cognitive aging research through the lens of a life course perspective that takes into account both behavioral and neural changes. Focusing on the fundamental principles that characterize a life course approach: genetics, early life experiences, motivation, emotion, social contexts, and lifestyle interventions, this handbook is an essential resource for researchers in cognition, aging, and gerontology.

The Handbook of Aging and Cognition Fergus I.M. Craik, Timothy A. Salthouse, 2011-03-15 Cognitive aging is a flourishing area of research. A significant amount of new data, a number of new theoretical notions, and many new research issues have been generated in the past ten years. This new edition reviews new findings and theories, enables the reader to assess where the field is today, and evaluates its points of growth. The chapters are organized to run from reviews of current work on neuroimaging, neuropsychology, genetics, and the concept of brain reserve through the mainstream topics of attention, memory, knowledge, and language to a consideration of individual differences and of cognitive aging in a lifespan context. This edition continues to feature the broad range of its predecessors while also providing critical assessments of current theories and findings.

The Handbook of Aging and Cognition Fergus I. M. Craik, Timothy A. Salthouse, 1992 The study of age-related changes in cognitive processes is flourishing as never before, making the area an exciting one for a growing number of researchers. In addition, cognitive aging research is moving out from its traditional roots in experimental and developmental psychology, creating increased contact with cognitive neuropsychology and cognitive neuroscience. To reflect these changes in the field, this volume includes chapters on abnormal aging, the neuroscience of aging, and applied cognitive psychology, along with the core section on basic cognitive processes. While other recent compilations of research in this area have given relatively brief overviews of the literature, the contributors were given space to review each topic in depth, asked to evaluate the field, not simply their own contributions, and to provide critical commentaries from their personal perspectives. Couched most often in terms of cognitive or information processing models, the general perspective of the contributors is a biologically based account of aging. This shared viewpoint gives the volume particular coherence in its treatment of theories and data. Topics covered include age differences in attention, perception, memory, knowledge, representation, reasoning, and language, as well as their neuropsychological and neurological correlates and practical implications.

Aging and Diversity Lisa Wagner, Chandra M Mehrotra, Man Guo, 2025-09-22

Aging and diversity intersect in important ways as individuals from different backgrounds experience aging through distinct lenses shaped by traditions values and beliefs As the older population in the United States is becoming more diverse it is important to understand the characteristics the potential and the needs of this population In this new and fully revised edition of Aging and Diversity Lisa S Wagner Chandra Mehrotra and Man Guo address key topics in diversity and aging discussing how the aging experience is affected by not only race and ethnicity but also gender religious affiliation

socioeconomic status rural urban community location and sexual orientation and gender identity Taking this broad view of human diversity allows the authors to convey some of the rich complexities facing aging populations complexities that provide both challenges to meet the needs of a diverse population of elders and opportunities to learn how to live in a pluralistic society Wagner Mehrotra and Guo present up to date knowledge and scholarship about aging and diversity in a way that engages readers in active learning placing ongoing emphasis on developing readers knowledge and skills fostering higher order thinking and encouraging exploration of personal values and attitudes Handbook of Adult Development Jack Demick, Carrie Andreoletti, 2012-12-06 This volume is an outgrowth of contemporary research on development over the adult lifespan which by now has burgeoned and developed both nationally and internationally However for us the impetus to be involved in this area was spawned and nurtured by our initial association with the Society for Research in Adult Development SRAD with its origins some 15 years ago by Michael Commons and his associates in Cambridge Massachusetts Through the good will and support of this society we also became and are still heavily involved with the Journal of Adult Development and the Kluwer Plenum Monograph Series on Adult Development and Aging of which this volume is a companion Many of the contributions in the volume are from SRAD members who consistently adhere to a focus on positive adult development Their chapters have been complemented by pieces from other researchers who have adopted more mainstream approaches to adult development and aging Regardless of the particular approach and or focus of the chapter all the work reported herein supports the relatively recent idea that development is not restricted to children and adolescents but continues throughout the adult lifespan in ways that we never envisioned some 20 years ago Thus the volume represents state of the art theory research and practice on adult development which has the potential to occupy us all for some time to come *Gerontechnology* Jan A.
