Learner-Centered Design of Computing Education Mark Guzdial, 2015-12-01 Computing education is in enormous demand Many students both children and adult are realizing that they will need programming in the future This book presents the argument that they are not all going to use programming in the same way and for the same purposes What do we mean when we talk about teaching everyone to program When we target a broad audience should we have the same goals as computer science education for professional software developers How do we design computing education that works for everyone This book proposes use of a learner centered design approach to create computing education for a broad audience It considers several reasons for teaching computing to everyone and how the different reasons lead to different choices about learning goals and teaching methods The book reviews the history of the idea that programming isn't just for the professional software developer It uses research studies on teaching computing in liberal arts programs to graphic designers to high school teachers in order to explore the idea that computer science for everyone requires us to re think how we teach and what we teach The conclusion describes how we might create computing education for everyone

Computing for Ordinary Mortals Robert St. Amant, 2013 In Computing for Ordinary Mortals cognitive scientist and AI expert Robert St Amant explains what he calls the really interesting part of computing which are the ideas behind the technology They re powerful ideas and the foundations for everything that computers do but they are little discussed This book will not tell you how to use your computer but it will give you a conceptual tour of how it works Some of the ideas like modularity which are so embedded in what we do as humans can also give us insight into our own daily activities how we interact with other people and in some cases even what s going on in our heads Computing is all around us and to quote Richard Hamming the influential mathematician and computer scientist The purpose of computing is insight not numbers and it is this insight that
