

The Retrograde Motion of Mars

1) On what days does Mars start and end the retrograde motion? (First Observation)

Starts early March

Ends early October

2) On what days does Mars start and end the retrograde motion? (Second Observation)

December 23rd

March 18th

3) Explain why Mars appears to undergo retrograde motion.

Retrograde motion is an apparent change in direction, with Mars having a faster orbit than Earth. As Earth passes Mars in its orbit, it looks like it's going backward, or retrograde. This is only an apparent motion, as Mars is actually moving forward in its orbit around the Sun.

4) Explain why we see Mars and not some of the Jovian planets for this motion.

The Jovian planets are much farther away, and their orbits take longer, so the retrograde would be harder to readily see.
