Ensite System User Guide:

Practical Guide to Catheter Ablation of Atrial Fibrillation Jonathan S. Steinberg, Pierre Jais, Hugh Calkins, 2016-01-26 Now in its second edition this practical guide offers clear headed guidance to the successful application of catheter ablation for atrial fibrillation This book concentrates on clinically relevant information that providers can put to immediate use caring for patients Takes a clear headed practical approach to ablation of atrial fibrillation long on actionable clinically relevant guidance succinct and to the point on the theory behind the procedure Edited by three leading internationally known electrophysiologists with extensive experience in ablation for atrial fibrillation Written by international team of experts reflecting global best practices from centers with considerable experience in the use of catheter ablation Format designed to serve the needs of electrophysiologists regardless of experience electrophysiology fellows electrophysiology nurses and lab technical staff Covers hot topics such as new noninvasive imaging techniques the treatment of challenging left atrial flutters options for persistent atrial fibrillation and when a redo ablation is needed and novel application of ablation targeting the autonomic nervous system *Cardiac Electrophysiology Without Fluoroscopy* Riccardo Proietti, Yan Wang, Yan Yao, Guo Qiang Zhong, Shu Lin Wu, Félix Ayala-Paredes, 2019-07-10 This book reflects how the concern regarding the effects of radiation exposure in patients and health personnel involved in cardiac electrophysiology EP has inspired new developments in cardiac electrophysiology procedures without the use of fluoroscopy This innovative method has become a subspecialty within electrophysiology with several EP laboratories around the world adopting an exclusive non fluoroscopy approach It features guidance on how to use three dimensional 3D navigation systems ablation energy sources and zero fluoroscopic implantation of cardiac electronic devices The potential complications and associated preventative methods with utilising RFCA are also described *Cardiac Electrophysiology Without Fluoroscopy* offers a thorough description of the technique correlated to the performance of EP procedure without the use of radiation and provides a valuable resource for those seeking a practically applicable guide on how to perform cardiac EP without fluoroscopy including practising and trainee electrophysiologists cardiac imagers general cardiologists and emergency medicine physicians *Progress in Catheter Ablation* Liong Bing Liem, Eugene Downar, 2013-11-11 Catheter ablation is widely accepted as an effective and safe form of therapy for cardiac arrhythmia In many instances this curative procedure is considered as the first line of therapy if not the ultimate treatment of choice With the use of radiofrequency RF modality which has revolutionized the technology from a barotraumatic potentially injurious procedure using high voltage direct current DC shock to a safe and relatively painless one catheter ablation procedure now carries a very low risk and is extremely effective for certain types of arrhythmia Its efficacy rate in curing supraventricular tachycardia involving an accessory pathway or dual atrioventricular nodal pathways has been near perfect and its application for certain types of atrial and ventricular arrhythmia have also been very satisfactory However conventional RF ablation has several well known limitations most notably is its ability to only

produce relatively small point lesions rendering it effective only for an arrhythmia with a small and or a superficial target It was soon recognized that the technology would not likely to have significant utility in arrhythmia with a more widespread target such as atrial fibrillation or those which involve scarred and deep myocardial tissue such as ventricular tachycardia Indeed the application of conventional RF technology in these complex but common arrhythmia has yielded unsatisfactory results

Handbook of Cardiac Anatomy, Physiology, and Devices Paul A.

Iaizzo, 2010-03-11 A revolution began in my professional career and education in 1997 In that year I visited the University of Minnesota to discuss collaborative opportunities in cardiac anatomy physiology and medical device testing The meeting was with a faculty member of the Department of Anesthesiology Professor Paul Iaizzo I didn't know what to expect but as always I remained open minded and optimistic Little did I know that my life would never be the same During the mid to late 1990s Paul Iaizzo and his team were performing anesthesia research on isolated guinea pig hearts We found the work appealing but it was unclear how this research might apply to our interest in tools to aid in the design of implantable devices for the cardiovascular system As discussions progressed we noted that we would be far more interested in reanimation of large

mammalian hearts in particular human hearts Paul was confident this could be accomplished on large hearts but thought that it would be unlikely that we would ever have access to human hearts for this application We shook hands and the collaboration was born in 1997 In the same year Paul and the research team at the University of Minnesota including Bill Gallagher and Charles Soule reanimated several swine hearts Unlike the previous work on guinea pig hearts which were reanimated in Langendorff mode the intention of this research was to produce a fully functional working heart model for device testing and cardiac research

Zei, MD, PhD, 2019-05-01 Catheter ablation has become a widely used approach to treating various cardiac arrhythmias Traditionally catheter ablation procedures are guided by fluoroscopic imaging to help understand catheter position during mapping The potentially significant exposure to radiation to the patient physician and staff increases risks of radiation exposure related disease Also the protective lead garments worn increases risks of orthopedic injury Current advanced electroanatomic mapping and intracardiac echocardiography technology have allowed the development of endocardial catheter ablation techniques without the use of fluoroscopy safely and effectively A host of expert and experienced authors present a practical overview of the rationale and methodology for a low or zero fluoro environment in the electrophysiology lab with the critical goal of significantly reducing radiation exposure to the patient physician and staff This practical guide Covers the entire spectrum of commonly and less commonly performed ablation procedures via endocardial approach Discusses general principles that are applicable across ICE and EAM platforms Will assist the electrophysiologist and their team to safely and effectively work toward the significant reduction in fluoroscopy utilization while also likely improving procedural safety i e fewer complications after the adoption of these techniques Includes a library of 50 videos with 9 extended films 108 minutes by Dr Razminia detailing step by step procedures and techniques Catheter Ablation of Cardiac Arrhythmias Shoei K. Huang, Mark A. Wood, 2011 The breadth and range of the topics covered and the consistent organization of each chapter give you simple but detailed access to information on anatomy diagnostic criteria differential diagnosis mapping and ablation the book includes a unique section on troubleshooting difficult cases for each arrhythmia and the use of tables illustrations and high quality figures is unmatched among publications in the field
