Urban and Regional Data Management Alenka Krek, Massimo Rumor, Sisi Zlatanova, Elfriede M. Fendel, 2009-06-02 Natural and human activities change the environment we are living in and consequently impact the quality of life Analysing these dynamics leads to a better understanding of urban change and facilitates urban development Research related to the management of urban data has a long tradition Through the years a variety of challenging research guestions has been investigated related to the collection storage use and visualisation of the data representing the urban phenomena in a computer based environment The Urban Data Management Symposium UDMS focuses on these issues since 1971 UDMS aims at providing a forum to discuss urban planning processes exchange ideas share information on available technology and demonstrate and promote successful information systems in local government. The focus is on urban regional and rural issues The UDMS 2009 annual addresses the following themes 3D modelling Spatial Data Infrastructures and databases Risk and Disaster management Environmental planning analysis and e government and Traffic and road monitoring The book will be a useful source of information for urban data related professionals such as scholars GIS engineers geomatic professionals photogrammetrists land surveyors mapping specialists urban planners and researchers as well as for postgraduate students Handbook of Research on Fuzzy Information Processing in Databases Galindo, Jos[],2008-05-31 This book and lecturers provides comprehensive coverage and definitions of the most important issues concepts trends and technologies in fuzzy topics applied to databases discussing current investigation into uncertainty and imprecision management by means of fuzzy sets and fuzzy logic in the field of databases and data mining It offers a guide to fuzzy information processing in databases Provided by publisher Foundations of Rule Learning Johannes Fürnkranz, Dragan Gamberger, Nada Lavrač, 2012-11-06 Rules the clearest most explored and best understood form of knowledge representation are particularly important for data mining as they offer the best tradeoff between human and machine understandability This book presents the fundamentals of rule learning as investigated in classical machine learning and modern data mining It introduces a feature based view as a unifying framework for propositional and relational rule learning thus bridging the gap between attribute value learning and

inductive logic programming and providing complete coverage of most important elements of rule learning. The book can be used as a textbook for teaching machine learning as well as a comprehensive reference to research in the field of inductive rule learning As such it targets students researchers and developers of rule learning algorithms presenting the fundamental rule learning concepts in sufficient breadth and depth to enable the reader to understand develop and apply rule learning techniques to real world data Advanced Information Systems Engineering Camille Salinesi, Moira C. Norrie, Oscar Pastor, 2013-06-20 This book constitutes the refereed proceedings of the 25th International Conference on Advanced Information Systems Engineering CAiSE 2013 held in Valencia Spain in June 2013 The 44 revised full papers were carefully reviewed and selected from 162 submissions The contributions have been grouped into the following topical sections services awareness business process execution products business process modelling modelling languages and meta models requirements engineering 1 enterprise architecture information systems evolution mining and predicting data warehouses and business intelligence requirements engineering 2 knowledge and know how information systems quality and human Computational Linguistics and Talking Robots Roland Hausser, 2011-08-19 The practical task of building a factors talking robot requires a theory of how natural language communication works Conversely the best way to computationally verify a theory of natural language communication is to demonstrate its functioning concretely in the form of a talking robot the epitome of human machine communication To build an actual robot requires hardware that provides appropriate recognition and action interfaces and because such hardware is hard to develop the approach in this book is theoretical the author presents an artificial cognitive agent with language as a software system called database semantics DBS Because a theoretical approach does not have to deal with the technical difficulties of hardware engineering there is no reason to simplify the system instead the software components of DBS aim at completeness of function and of data coverage in word form recognition syntactic semantic interpretation and inferencing leaving the procedural implementation of elementary concepts for later In this book the author first examines the universals of natural language and explains the Database Semantics approach Then in Part I he examines the following natural language communication issues using external surfaces the cycle of natural language communication memory structure autonomous control and learning In Part II he analyzes the coding of content according to the aspects semantic relations of structure simultaneous amalgamation of content graph theoretical considerations computing perspective in dialogue and computing perspective in text The book ends with a concluding chapter a bibliography and an index The book will be of value to researchers graduate students and engineers in the areas of artificial intelligence and robotics in particular those who deal with natural language processing
