How to Grow a Robot Mark H. Lee, 2020-05-26 How to develop robots that will be more like humans and less like computers more social than machine like and more playful and less programmed Most robots are not very friendly They vacuum the rug mow the lawn dispose of bombs even perform surgery but they aren t good conversationalists It s difficult to make eye contact If the future promises more human robot collaboration in both work and

play wouldn't it be better if the robots were less mechanical and more social In *How to Grow a Robot* Mark Lee explores how robots can be more human like friendly and engaging Developments in artificial intelligence notably Deep Learning are widely seen as the foundation on which our robot future will be built These advances have already brought us self driving cars and chess match winning algorithms But Lee writes we need robots that are perceptive animated and responsive more like humans and less like computers more social than machine like and more playful and less programmed The way to achieve this he argues is to grow a robot so that it learns from experience just as infants do After describing what's wrong with artificial intelligence one key shortcoming it's not embodied Lee presents a different approach to building human like robots developmental robotics inspired by developmental psychology and its accounts of early infant behavior He describes his own experiments with the iCub humanoid robot and its development from newborn helplessness to ability levels equal to a nine month old explaining how the iCub learns from its own experiences AI robots are designed to know humans as objects developmental robots will learn empathy Developmental robots with an internal model of self will be better interactive partners with humans That is the kind of future technology we should work toward

spotlight is yours *The role of body and environment in cognition* Dermot Lynott, Judith Holler, Louise Connell, 2014-08-25

Recent evidence has shown many ways in which our bodies and the environment influence cognition. In this Research Topic we aim to develop our understanding of cognition by considering the diverse and dynamic relationship between the language we use, our bodily perceptions and our actions and interactions in the broader environment. There are already many empirical effects illustrating the continuity of mind-body-environment: manipulating body posture influences diverse areas such as mood, hormonal responses and perception of risk; directing attention to a particular sensory modality can affect language processing, signal detection and memory performance; placing implicit cues in the environment can impact upon social behaviours, moral judgements and economic decision making. This Research Topic includes papers that explore the question of how our bodies and the environment influence cognition, such as how we mentally represent the world around us, understand language, reason about abstract concepts, make judgements and decisions and interact with objects and other people. Contributions focus on empirical, theoretical, methodological or modelling issues, as well as opinion pieces or contrasting perspectives. Topic areas include perception and action, social cognition, emotion, language processing, modality, specific representations, spatial representations, gesture, atypical embodiment, perceptual simulation, cognitive modelling and perspectives on the future of embodiment.
