Terraforming Mars Martin Beech, Joseph Seckbach, Richard Gordon, 2021-11-18 TERRAFORMING MARS This book provides a thorough scientific review of how Mars might eventually be colonized industrialized and transformed into a world better suited to human habitation The idea of terraforming Mars has in recent times become a topic of intense scientific interest and great public debate Stimulated in part by the contemporary imperative to begin geoengineering Earth as a means to combat global climate change the terraforming of Mars will work to make its presently hostile environment more suitable to life especially human life Geoengineering and terraforming at their core have the same goal that is to enhance or revive the ability of a specific environment to support human life society and industry The chapters in this text written by experts in their respective fields are accordingly in resonance with the important and ongoing discussions concerning the human stewardship of global climate systems In this sense the text is both timely and relevant and will cover issues relating to topics that will only grow in their relevance in future decades The notion of terraforming Mars is not a new one as such and it has long played as the background narrative in many science fiction novels This book however deals exclusively with what is physically possible and what might conceivably be put into actual practice within the next several human generations Audience Researchers in planetary science astronomy astrobiology space engineering architecture ethics as well as members of the space industry
