Bell-Shape Testing System Acene Fleurmons BSW MOM and EdD, 2015-08-11 This book is about a presentation of Benjamin Blooms Taxonomy of Educational Objectives Cognitive Domain It rather wants to be a research paper in which I make a profound reflection on the educational objectives presented by Bloom in 1956 I take the opportunity to seek knowledge or information on how they are implemented by the schools The greatest opportunity I've had is to indicate how these educational objectives should be implemented in lifelong learning so students of any age especially in the public schools can have insights into them for their full success This book also contains some critics of Blooms text related to the classification of the objectives For example comprehension cannot be classified immediately after knowledge because one needs to develop some mental and intellectual efforts before he or she can be confident with having insight into anything This stage of knowing is based on the analysis of the encountered facts

Grading Education Richard Rothstein, 2008-12-14 Yes we should hold public schools accountable for effectively spending the vast funds with which they have been entrusted But accountability policies like No Child Left Behind based exclusively on math

and reading test scores have narrowed the curriculum misidentified both failing and successful schools and established irresponsible expectations for what schools can accomplish Instead of just grading progress in one or two narrow subjects we should hold schools accountable for the broad outcomes we expect from public education basic knowledge and skills critical thinking an appreciation of the arts physical and emotional health and preparation for skilled employment and then develop the means to measure and ensure schools success in achieving them Grading Education describes a new kind of accountability plan for public education one that relies on higher quality testing focuses on professional evaluation and builds on capacities we already possess This important resource Describes the design of an alternative accountability system that would not corrupt education as does NCLB and its state testing systems Explains the original design of NAEP in the 1960s and shows why it should be revived Defines the broad goals of education beyond math and reading test scores and reports on surveys to confirm public and governmental support for such goals Relates these broad goals of education to the desire for accountability in education
