

Physiology of Blood Worksheet

Student Name:

Time Estimate: 35 minutes

Background

Scientists can determine a person's blood type by adding various serums to the blood and seeing what makes clotting occur.

The serums they add to a blood sample are

- Anti-A (antibodies against antigen A)
- Anti-B (antibodies against antigen B)
- Anti-D (antibodies against Rhesus factor)

If the blood clots when one of these testing serums is added, it means the blood has the blood type matching the serum. For example, if anti-A is added to a blood sample and it clots, the blood sample is either blood type A or blood type AB.

Here is a chart of serum results for all the blood types. A solid well of red blood means no reaction and no clotting. A well with clumps of red indicates a reaction and clotting.

Resources in Education ,1982 *The American Biology Teacher* ,2004 *A fábrica de cretinos digitais* Michel Desmurget,2021-09-17 Por que os grandes gurus do Vale do Silício proíbem seus filhos de usar telas? Voc sabia que nunca na história da humanidade houve um declínio tão acentuado nas habilidades cognitivas? Voc sabia que apenas trinta minutos por dia na frente de uma tela são suficientes para que o desenvolvimento intelectual da criança comece a ser afetado? O uso da tecnologia digital smartphones computadores tablets etc pelas novas gerações tem sido absolutamente astronômico. Para crianças de 2 a 8 anos de idade o consumo médio de cerca de três horas por dia. Entre 8 e 12 anos a média diária gira em torno de cinco horas. Na adolescência esse número sobe para quase sete horas, o que significa mais de 2.400 horas por ano em plena fase de desenvolvimento intelectual. Ao contrário do que a imprensa e a indústria da tecnologia costumam difundir, o uso das telas longe de ajudar no desenvolvimento de crianças e estudantes acarreta sérios malefícios: síndrome do corpo obeso, problemas cardiovasculares, expectativa de vida reduzida, estado emocional, agressividade, depressão, comportamentos de risco e ao desenvolvimento intelectual, empobrecimento da linguagem, dificuldade de concentração e memória. O neurocientista Michel Desmurget, diretor de pesquisa do Instituto Nacional de Saúde da França, propõe a primeira síntese de vários estudos que confirmaram os perigos reais das telas e nos alerta para as graves consequências de continuarmos a promover sem senso crítico o uso dessas tecnologias.
