Entwistle,2018-03-05 Educational sociologists have paid relatively little attention to children in middle childhood ages 6 to 12 whereas developmental psychologists have emphasized factors internal to the child much more than the social contexts in explaining children s development Children Schools and Inequality redresses that imbalance It examines elementary school outcomes e g test scores grades retention rates in light of the socioeconomic variation in schools and neighborhoods the organizational patterns across elementary schools and the ways in which family structure intersects with children s school performance Adding data from the Baltimore Beginning School Study to information culled from the fields of sociology child development and education this book suggests why the gap between the school achievement of poor children and those who are better off has been so difficult to close Doris Entwistle Karl Alexander and Linda Olson show why the first grade transition how children negotiate entry into full time schooling is a crucial period They also show that events over that time have repercussions that echo throughout children s entire school careers Currently the only study of this life transition to cover a comprehensive sample and to suggest straightforward remedies for urban schools Children Schools and Inequality can inform educators practitioners and policymakers as well as researchers in the sociology of education and child development

*Tyranny of the Textbook* Beverlee Jobrack,2012 In *Tyranny of the Textbook* a retired educational director gives a fascinating look behind the scenes of how K 12 textbooks are developed written adopted and sold Readers will come to understand why all the reform efforts have failed Most importantly the author clearly spells out how the system can change so that reforms and standards have a shot at finally being effective **Tyranny of the Textbook** Beverlee Jobrack,2011-12-23 Educational reforms and standards have been a topic of public debate for decades with the latest go round being the State Common Core Curriculum Standards But time and again those reforms have failed and each set of standards no matter how new and different has had little impact on improving student achievement Why The textbooks Textbooks sell based on design and superficial features not because they are based on the latest research on how children learn and how well they promote student achievement In *Tyranny of the Textbook* Beverlee Jobrack retired from educational publishing sheds light on why this happens She gives an engaging and fascinating look behind the scenes of how K 12 textbooks are developed written adopted and sold And perhaps most importantly she clearly spells out how the system can change so that reforms and standards have a shot at finally being effective Did you know Reform efforts have focused on

writing and rewriting standards and tests but these rarely have any effect on the core curriculum that is published. School districts and states don't use effectiveness as a criterion for evaluating and purchasing textbooks. Publishers don't offer textbooks with better content or the latest teaching methods because teachers don't want textbooks that require them to change their practices. Teachers report that they don't rely on a textbook in their class but research shows that they do. Three companies publish 75 percent of the K-12 educational materials. Those three companies are producing similar programs with the same instructional strategies, none of which require teachers to change their practices significantly. Publishers write textbooks for California and Texas. All of the other markets have to make do with books only superficially adjusted for their states.

**Eastern European Mathematics Education in the Decades of Change** Alexander Karp, 2020-05-04. This contributed volume is devoted to the recent history and evolution of mathematics education in Eastern Europe, exploring how it was influenced by social and political changes in this part of the world. Despite the broad recognition of the importance of these changes, little scholarship exists that examines the ways in which they were followed by changes in the teaching of mathematics in the post-socialist countries. Indeed, the analyzed processes are complex and vary across the states. Accordingly, this book touches on many factors, including differences in cultures and traditions that find expression in the teaching of mathematics. Specifically, this volume seeks to explore what changes there were in education in general and in the position of mathematics in school education in these years and how these changes may be explained and documented, what changes there were in the content of mathematics education and its assessment and how were they motivated and adopted, what new textbooks appeared and what new methodological ideas were offered in them, how and why mathematics teacher education and/or professional development changed, what was the role if any of foreign influences on mathematics education, etc. The book will be of interest to both researchers in mathematics education and practitioners, teachers as well as a broader audience of historians and educators exploring the political aspects of education.

Teaching and Learning in Maths Classrooms Chiara Andrà, Domenico Brunetto, Esther Levenson, Peter Liljedahl, 2017-05-03. The book presents a selection of the most relevant talks given at the 21st MAVI conference held at the Politecnico di Milano. The first section is dedicated to classroom practices and beliefs regarding those practices, taking a look at prospective or practicing teachers' views of different practices such as decision making, the roles of explanations, problem solving, patterning, and the use of play. Of major interest to MAVI participants is the relationship between teachers' professed beliefs and classroom practice aspects that provide the focus of the second section. Three papers deal with teacher change, which is notoriously difficult even when the teachers themselves are interested in changing their practice. In turn, the book's third section centers on the undercurrents of teaching and learning mathematics, which can surface in various situations, causing tensions and inconsistencies. The last section of this book takes a look at emerging themes in affect-related research, with a particular focus on attitudes towards assessment. The book offers a valuable resource for all teachers and researchers working in this area.
