As part of the NSF's EXPRES project the authors investigated ways to interchange multi media documents among diverse systems Their investigations led to an analysis and implementation of multi media document format translation in general and of the ODA standard in particular ODA Office Document Architecture is a new ISO and CCITT international standard for representing multi media documents The results of their investigations are presented in this book The book contains overview information about multi media document architecture and formats an introduction to ODA detailed technical specifications on how to use ODA for multi media document format translation and the authors experiences in implementing and using ODA The book also contains a complete user manual for the authors publically available ODA software tool kits for manipulating ODA and raster formats tools for examining ODA documents and sample translators between ODA and several other multi media formats This book provides comprehensive information about ODA for a large audience

Planners can get basic information about using ODA for interoperation of multi media systems Researchers receive detailed discussions about the advantages and problems of using ODA for document representation format translation and archival storage System designers can use the technical

descriptions of translators and tools in specifying their own System builders can easily obtain the software as a basis for prototyping and investigating their own ODA implementations

Guide to Reliable Internet Services and Applications Charles R. Kalmanek,Sudip Misra,Yang (Richard) Yang,2010-06-09

An oft repeated adage among telecommunication providers goes There are ve things that matter reliability reliability reliability time to market and cost If you can t do all ve at least do the rst three Yet designing and operating reliable networks and services is a Herculean task Building truly reliable components is unacceptably expensive forcing us to c struct reliable systems out of unreliable components The resulting systems are inherently complex consisting of many different kinds of components running a variety of different protocols that interact in subtle ways Inter networkssuch as the Internet span multiple regions of administrative control from campus and cor rate networks to Internet Service Providers making good end to end performance a shared responsibility borne by sometimes uncooperative parties Moreover these networks consist not only of routers but also lower layer devices such as optical switches and higher layer components such as rewalls and proxies And these components are highly con gurable leaving ample room for operator error and buggy software As if that were not dif cult enough end users understandably care about the performance of their higher level applications which has a complicated relationship with the behavior of the underlying network Despite these challenges researchers and practitioners alike have made trem dous strides in improving the reliability of modern networks and services
